Director

Center for Statistics

"The purpose of the Center shall be to collect and disseminate statistics and other data related to education in the United States and in other nations. The Center shall . . . collect, collate, and, from time to time, report full and complete statistics on the conditions of education in the United States; conduct and publish reports on specialized analyses of the meaning and significance of such statistics; . . . and review and report on education activities in foreign countries."--Section 406(b) of the General Education Provisions Act, as amended (20 U.S.C. 1221e-1).

FOREWORD

The 1985-86 edition of the *Digest of Education Statistics* is the 22nd in a series of publications initiated by this office in 1962. (The *Digest* has been issued annually except for combined editions this year and for the years 1977-78 and 1983-84.) Its primary purpose is to provide an abstract of statistical information covering the broad field of American education from prekindergarten through graduate school. It does this by using materials from numerous sources, including the statistical surveys and estimates of the Center for Statistics and other appropriate sources, both governmental and nongovernmental. The publication contains information on a variety of subjects within the field of education statistics, including the number of schools and colleges, teachers, enrollments, graduates, educational attainment, finances, Federal funds for education, employment and income of graduates, libraries, and international education.

The *Digest* is divided into six chapters: All Levels of Education, Elementary and Secondary Education, College and University Education, Adult and Vocational Education, Federal Programs for Education and Related Activities, and Special Studies and Statistics Related to American Education. To qualify for inclusion in this publication, material must be nationwide in scope and of current interest and value. The introduction supplements the tabular materials in chapters I through VI by providing a brief overview of current trends in American education.

In addition to updating many of the statistics that have appeared in previous years, this edition contains a substantial amount of new material. Included among the data appearing for the first time in the *Digest* are the following: The total number of participants in the educational process, including enrollment, teachers, other professional and administrative staff, and nonprofessional staff at all levels; average number of Carnegie units earned by recent high school graduates, by field of study; course requirements for high school graduation, by State; trend data on expenditure per pupil in public schools in unadjusted and adjusted dollars, by State; full-time instructional staff in institutions of higher education, by racial/ethnic group, academic rank, and sex; trend data on earned degrees conferred, by discipline division; the different packages of financial aid that students use to finance their postsecondary education; participation of persons 16 years of age and over in academic, vocational, and continuing education; Department of Education outlays, by level of education and by type of recipient; support for education generated by Federal programs; test scores for selected countries on international mathematics examinations; and trend data on the number of elementary and secondary schools using microcomputers.

A number of people have contributed in one way or another to the development of this publication. In particular, the authors would like to acknowledge the substantial contributions made by Fred Beamer, Esther Tron, Imelda Smallwood, and Charlene Hoffman. Fred Beamer had the major responsibility for chapter IV and also contributed a number of other tables to this report. Much of the material in chapter V was adapted from the research of Esther Tron. Imelda Smallwood took full responsibility for chapter VI and for the tables in National Assessment in chapter I. Charlene Hoffman displayed a great deal of skill and ingenuity in carrying out a variety of statistical assignments. Mark Travaglini provided editorial assistance. In addition, Pat Brown, Zola Brown, Paul Horn, and Celeste Loar reviewed portions of the report.

In the past, the *Digest of Education Statistics* has proved to be of interest and value to educational researchers and administrators, government officials, the communications media, the business community, and the general public. We trust that the users of this 22nd edition will find it just as valuable as its predecessors.

FIGURES

1. The structure of education in the United States.....	4
2. Percentage changes in public school enrollment, by State: Fall 1973 to fall 1983.....	33
3. Percentage changes in enrollments in academic courses and in the total number of students in public high schools: United States, 1972-73 and 1981-82.....	42
4. Attitudes of high school seniors towards teachers and education by overall grade averages: 1982.....	55
5. High school graduates: United States, 1976-77 to 1991-92.....	70
6. Percentage increases in the enrollment of college students with selected characteristics, fall 1973 to fall 1983.....	95

7. Percentage of all college students and of first-time freshmen enrolled in two-year colleges: United States, fall 1963 to fall 1983.....	111
8. Percentage of earned degrees received by women: United States, 1962, 1972, and 1982.....	133
9. Percentage changes in public and private college costs compared to changes in the Consumer Price Index: United States, 1975-76 to 1985-86.....	157
10. Market value of endowment in current and in adjusted dollars in institutions of higher education, by control of institution: United States, 1973 to 1983.....	171
11. Participation in adult education, by age group, income level, and subject area: United States, May 1981.....	178
12. Foreign students enrolled in American institutions of higher education: 1983-84.....	218

TABLES

I. All Levels of Education

Enrollment

1. Estimated number of participants in elementary and secondary education and in higher education: United States, fall 1985.....	6
2. Enrollment in educational institutions, by type of control and by level of instruction: United States, fall 1983.....	6
3. Projected enrollment in educational institutions, by level of instruction and by type of control: United States, fall 1984, fall 1985, and fall 1990.....	7

	<i>Page</i>		<i>Page</i>
4. Enrollment in educational institutions, by level and by control of institution: United States, 1869-70 to fall 1985	8	14. Expenditures of educational institutions, by level and control of institution: United States, 1899-1900 to 1985-86	16
5. Percent of the population 3 to 34 years old enrolled in school, by race, sex, and age: United States, October 1983	9	15. Direct general expenditures of State and local governments for all functions and for education, by level and by State: 1982-83	17
6. Percentage of the population 3 to 34 years old enrolled in school, by age and by sex: United States, October 1965 to October 1983	9	16. Direct general expenditures per capita of State and local governments for all functions and for education, by level and by State: 1982-83	18
Teachers and Other Instructional Staff		Educational Achievement	
7. Estimated number of classroom teachers in elementary and secondary schools, and senior instructional staff in institutions of higher education: United States, fall 1970 to fall 1985	10	17. National Assessment of Educational Progress for age 9, by subject and by selected characteristics of participants: United States, 1975-82	19
Schools		18. National Assessment of Educational Progress for age 13, by subject and by selected characteristics of participants: United States, 1975-82	20
8. Number of schools, by level and control and by State: 1982-83	11	19. National Assessment of Educational Progress for age 17, by subject and by selected characteristics of participants: United States, 1975-82	21
Retention Rates and Educational Attainment		20. National Assessment of Educational Progress in science for ages 9, 13, and 17, by assessment area and by selected characteristics of participants: United States, 1976-77 and 1981-82	22
9. Estimated retention rates, 5th grade through college entrance, in public and private schools: United States, 1924-32 to 1975-83	12	21. National Assessment of Educational Progress in mathematics for ages 9, 13, and 17, by selected characteristics of participants: United States, 1977-78 and 1981-82	23
10. Level of school completed by persons age 25 and over and 25 to 29, by race: United States, 1910 to 1985	13	22. National Assessment of Educational Progress in music for ages 9, 13, and 17, by selected characteristics of participants: United States, 1971-72 and 1978-79	24
11. Years of school completed by persons 25 years old and over, by State: April 1980	14		
12. Illiteracy of the population 14 years old and over, by race, age, and sex: United States, 1959 to 1979	15		
Educational Finances			
13. Expenditures of educational institutions related to the gross national product, by level of institution: United States, 1959-60 to 1984-85	15		

23. National Assessment of Educational Progress in art for ages 9, 13, and 17, by selected characteristics of participants: United States, 1974-75 and 1978-79..... 25

24. National Assessment of Educational Progress in reading for ages 9, 13, 17, by selected characteristics of participants: United States, 1974-75, 1979-80, and 1983-84..... 26

II. Elementary and Secondary Education

Enrollment

25. Enrollment in public elementary and secondary schools, by level and by State: Fall 1981 to fall 1985..... 28
26. Historical summary of public elementary and secondary school statistics: United States, 1986-70 to 1980-81..... 30
27. Enrollment by grade in public elementary and secondary schools: United States, fall 1972 to fall 1983..... 34
28. Membership and attendance in public elementary and secondary schools, by State: 1980-81 and 1983-84..... 35
29. Ages for compulsory school attendance, by State: 1984..... 36
30. Selected statistics on the transportation of public school pupils, by State: 1979-80..... 37
31. Number and percent of public school pupils transported at public expense, and current expenditures for transportation: United States, 1929-30 to 1981-82..... 38
32. Enrollment in special education programs in public elementary and secondary schools, by amount of participation and by type of handicap: United States, fall 1980..... 38

33. Enrollment in public elementary and secondary schools, by race or ethnicity and by State: Fall 1980..... 39

34. Enrollment in grades 9-12 in public and private schools compared with population 14-17 years of age: United States, 1889-90 to fall 1983..... 40

35. Enrollment of 3-, 4-, and 5-year-old children in preprimary programs, by age and by type of program: United States, October 1982 and October 1983..... 41

36. Number of students enrolled in various subject areas compared with total enrollment in grades 9-12 of public secondary schools: United States, 1972-73 and 1981-82..... 41

37. Enrollment in foreign languages compared with total enrollment in grades 9-12 of public secondary schools: United States, fall 1965 to 1982..... 43

38. Average number of Carnegie units earned by high school graduates, by selected student and school characteristics: United States, 1982..... 44

39. Enrollment, average daily attendance, and classroom teachers in public elementary and secondary schools, by State: 1983-84..... 45

40. Enrollment, average daily attendance, and classroom teachers in public elementary and secondary schools, by State: 1982-83..... 46

41. Enrollment in private elementary and secondary schools, by affiliation of school and by State: Fall 1980..... 47

42. Summary statistics on private elementary and secondary schools, by level and affiliation of schools: United States, fall 1983..... 48

	<i>Page</i>		<i>Page</i>
43. Summary statistics on Catholic elementary and secondary schools: United States, 1919-20 to 1984-85.....	48	54. Selected statistics for the 120 largest public school systems in 1981-82.....	60
44. Classroom teachers and pupils per teacher in private elementary and secondary schools, by affiliation of school and by State: Fall 1980.....	49	55. Number of public school systems, enrollment, and schools, by size of system: United States, fall 1983.....	64
Teachers and Other Instructional Staff		56. Number of local basic administrative units (school districts) and number of public and private elementary and secondary schools: United States, 1929-30 to 1982-83.....	64
45. Number of public elementary and secondary classroom teachers, by level and by State: Fall 1982 and fall 1983.....	50	57. Number of public schools with elementary grades only, by grade span and by State: 1982-83.....	65
46. Staff employed in public school systems, by type of assignment and by State: Fall 1982.....	51	58. Number of public schools with secondary grades only, by grade span and by State: 1982-83.....	66
47. Staff employed in public school systems, by type of assignment and by State: Fall 1983.....	52	59. Number of public schools with both elementary and secondary grades, by grade span, and schools with unclassified grade spans, by State: 1982-83.....	67
48. Selected characteristics of public school teachers: United States, spring 1961 to spring 1981.....	53	60. Number of public elementary and secondary schools, by type of school: United States, 1970-71 to 1982-83.....	68
49. Public secondary school teachers, by subject taught: United States, spring 1961 to spring 1981.....	53	61. Percentage distribution of public elementary and secondary schools and of pupils enrolled, by type and by size of school: United States, 1982-83.....	68
50. Estimated average annual salary of classroom teachers in public elementary and secondary schools: United States, 1959-60 to 1983-84.....	56	High School Seniors, Graduates, and Dropouts	
51. Average annual salary of instructional staff in public elementary and secondary schools, and average annual earnings of full-time employees in all industries: United States, 1929-30 to 1983-84.....	57	62. Number of high school graduates compared with population 17 years of age: United States, 1869-70 to 1982-83.....	69
52. Average annual salary of instructional staff in public elementary and secondary schools, by State: 1939-40 to 1983-84.....	58	63. Public high school graduates, by State: 1979-80 to 1982-83.....	71
Schools and School Districts		64. Private high school graduates, by affiliation of school and by State: 1979-80.....	72
53. Number of local basic administrative units (school districts), by State: Fall 1982 and fall 1983.....	59	65. Minimum course requirements for high school graduates, by State: November 1984.....	73

	<i>Page</i>
66. Percentage of high school dropouts among persons 14 to 34 years old, by age, race, and sex: United States, October 1973 and October 1983.....	76
67. Scholastic Aptitude Test score averages for college-bound high school seniors, by sex: United States, 1966-67 to 1983-84.....	76
68. Selected statistics on the educational experiences and extracurricular activities of high school seniors: United States, spring 1980.....	77
Income and Expenditures	
69. Revenue receipts of public elementary and secondary schools from Federal, State, and local sources: United States, 1919-20 to 1982-83.....	80
70. Revenue and nonrevenue receipts of public elementary and secondary schools, by source and by State: 1982-83.....	81
71. Current expenditures for public elementary and secondary education, by State: 1959-60 to 1982-83.....	82
72. Estimated expenditures for public elementary and secondary education, by purpose and by State: 1983-84.....	83
73. Summary of expenditures for public elementary and secondary education, by purpose: United States, 1919-20 to 1979-80.....	84
74. Personal income, 1982, related to total expenditures and to State and local revenues for public schools, by State: 1982-83.....	85
75. Current expenditure per pupil in average daily attendance in public elementary and secondary schools, by State: 1959-60 to 1982-83.....	86

	<i>Page</i>
76. Total and current expenditure per pupil in average daily attendance in public elementary and secondary schools: United States, 1929-30 to 1983-84.....	87
III. College and University Education	
Enrollment	
77. Total enrollment in institutions of higher education, by attendance status, sex of student, control of institution, and State: Fall 1983....	90
78. Total enrollment in institutions of higher education, by attendance status, sex of student, control of institution, and State: Fall 1982....	91
79. Total enrollment in institutions of higher education, by level of enrollment and by State: Fall 1983..	92
80. Total enrollment in institutions of higher education, by level of enrollment and by State: Fall 1982..	93
81. Total enrollment in institutions of higher education, by type and control of institution and by State: Fall 1982 and fall 1983.....	94
82. Selected statistics for the 100 college and university campuses enrolling the largest number of students: United States, 1981-82 and fall 1983.....	96
83. Residence and migration of all new students in institutions of higher education, by State: Fall 1981.....	100
84. Total enrollment in institutions of higher education, by control of institution, sex, level of enrollment, and attendance status: United States, fall 1982 and fall 1983.....	101
85. Total enrollment in institutions of higher education, by type and control of institution: United States, fall 1978 to fall 1983.....	102

	<i>Page</i>
86. Total enrollment in institutions of higher education, by type of program and by control of institution: United States, fall 1978 to fall 1983.....	102
87. Total enrollment in institutions of higher education, by attendance status, sex of student, and control of institution: United States, fall 1963 to fall 1983.....	103
88. Graduate enrollment in institutions of higher education, by attendance status, sex of student, and control of institution: United States, fall 1969 to fall 1983.....	103
89. Full-time equivalent enrollment in institutions of higher education, by type and control of institution: United States, fall 1970 to fall 1983.....	104
90. Percentages of the high school class of 1980 participating in postsecondary education, by attendance status, sex, race, socioeconomic status, and ability level: United States, fall 1980 to fall 1983.....	104
91. Total enrollment in institutions of higher education in selected major fields of study, by sex: United States, fall 1978 and 1980.....	105
92. Enrollment of persons 14 to 34 years of age in institutions of higher education, by major field of study: United States, October 1966, 1972, 1978, and 1982	106
93. Selected characteristics of college students 14 to 34 years of age: United States, October 1983.....	106
94. Selected statistics on traditionally black institutions of higher education: United States, 1981-82 and fall 1983.....	107
95. Total enrollment in institutions of higher education, by race/ethnicity of student and by type and control of institution: United States, fall 1982.....	108

	<i>Page</i>
96. Total enrollment in institutions of higher education, by control of institution and by race/ethnicity and sex of student: United States, fall 1980 and fall 1982.....	108
97. Total enrollment in institutions of higher education, by type of institution and by race/ethnicity of student: United States, fall 1976 to fall 1982.....	109
98. Historical summary of faculty, students, degrees, and finances in institutions of higher education: United States, 1869-70 to 1981-82.....	110
99. Number of 2-year institutions of higher education, by control, and their enrollment, by control and by sex: United States, fall 1963 to fall 1983.....	112

Faculty and Other Professional Staff

100. Full-time instructional faculty in institutions of higher education, by racial/ethnic group, academic rank, and sex: United States, fall 1981.....	113
101. Full-time and part-time senior instructional staff in institutions of higher education, by control and type of institution: United States, fall 1970 to fall 1984	113
102. Average salary of full-time instructional faculty in institutions of higher education, by academic rank and by sex: United States, selected years, 1972-73 to 1983-84.....	114
103. Average salary of full-time instructional faculty on 9-month contracts in institutions of higher education, by type and control of institution, and by State: 1982-83.....	115

Institutions

104. Number of institutions of higher education and branches, by type, control, and size of enrollment: United States, fall 1983.....	116
---	-----

105. Number of institutions of higher education and branches, by control of institution, highest level of offering, and sex of student body: United States, 1984-85	117	116. Bachelor's degrees conferred by institutions of higher education, by racial/ethnic group, major field of study, and sex of student: United States, 1980-81	134
106. Number of institutions of higher education and branches, by control of institution and by State: 1984-85	118	117. Master's degrees conferred by institutions of higher education, by racial/ethnic group, major field of study, and sex of student: United States, 1980-81	136
107. Number of institutions of higher education and branches, by type, control, and State: 1984-85	119	118. Doctor's degrees conferred by institutions of higher education, by racial/ethnic group, major field of study, and sex of student: United States, 1980-81	138
108. Number of institutions of higher education, by type, control, and State: 1984-85	120	119. First-professional degrees conferred by institutions of higher education, by racial/ethnic group, major field of study, and sex of student: United States, 1980-81..	140
109. Number of institutions of higher education, by control and type of institution: United States, 1949-50 to 1984-85	121	120. First-professional degrees conferred by institutions of higher education, by sex of student, control of institution, and field of study: United States, 1981-82 and 1982-83	141
110. Number of institutions of higher education that have closed their doors, by control and type of institution: United States, 1960-61 to 1982-83	122	121. Number of first-professional degrees conferred in dentistry, medicine, and law, by sex: United States, 1949-50 to 1981-82	142
Degrees		122. Earned degrees in English and literature conferred by institutions of higher education, by level of degree and by sex of student: United States, 1949-50 to 1981-82	142
111. Earned degrees conferred by institutions of higher education, by level of degree and by State: 1981-82 and 1982-83	123	123. Earned degrees in modern foreign languages conferred by institutions of higher education, by level of degree and by sex of student: United States, 1949-50 to 1981-82	143
112. Bachelor's, master's and doctor's degrees conferred by institutions of higher education, by sex of student and by field of study: United States, 1981-82	124	124. Earned degrees in German conferred by institutions of higher education, by level of degree and sex of student: United States, 1949-50 to 1981-82	143
113. Bachelor's degrees conferred by institutions of higher education, by discipline division: United States, 1970-71 to 1982-83	129		
114. Master's degrees conferred by institutions of higher education, by discipline division: United States, 1970-71 to 1982-83	130		
115. Doctor's degrees conferred by institutions of higher education, by discipline division: United States, 1970-71 to 1982-83	131		

	<i>Page</i>		<i>Page</i>
125. Earned degrees in French conferred by institutions of higher education, by level of degree and by sex of student: United States, 1949-50 to 1981-82.....	144	Income	
126. Earned degrees in Spanish conferred by institutions of higher education, by level of degree and by sex of student: United States, 1949-50 to 1981-82.....	144	135. Current-fund revenue of institutions of higher education, by control of institution and by source: United States, 1981-82.....	152
127. Earned degrees in philosophy conferred by institutions of higher education, by level of degree and by sex of student: United States, 1949-50 to 1981-82.....	145	136. Current-fund revenue of institutions of higher education, by control of institution and by State: 1980-81 and 1981-82.....	153
128. Earned degrees in fine and applied arts, conferred by institutions of higher education, by level of degree and by sex of student: United States, 1970-71 to 1981-82.....	145	137. Revenue of institutions of higher education: United States, 1919-20 to 1981-82.....	154
129. Earned degrees conferred by institutions of higher education, by level of degree: United States, 1869-70 to 1981-82.....	146	138. Current-fund revenue received from the Federal Government, by the 100 institutions of higher education receiving the largest amounts: United States, 1981-82.....	155
130. Statistical profile of persons receiving doctor's degrees, by field of study: United States, 1983-84.	147	College Costs and Student Financial Assistance	
131. Statistical profile of persons receiving doctor's degrees, by field of study: United States, 1982-83.	148	139. Estimated undergraduate tuition and fees and room and board rates in institutions of higher education, by type and control of institution: United States, 1964-65 to 1985-86.....	158

INTRODUCTION

A Statistical Look at American Education: Fall 1985 ¹

In the fall of 1985, about 56.9 million persons were enrolled in American schools and colleges. Nearly 3.2 million were employed as elementary and secondary school teachers and as college instructors. Other professional and administrative staff totaled more than 800,000 and the nonprofessional staff of educational institutions exceeded 2.4 million. Thus, in the fall of 1985, approximately 63.4 million Americans were involved, directly or indirectly, in providing or receiving formal education. In a Nation with a population of nearly 239 million, more than 1 out of every 4 persons were participants in the educational process.

After 13 years of annual declines, beginning in 1972 and extending through 1984, it is believed that enrollment in public and private elementary and secondary schools will show a small increase in the fall of 1985. The increase occurred mainly at the preprimary level (nursery school and kindergarten), where enrollment rose from about 3.7 million in 1984 to 3.8 million in 1985. Enrollment in grades 1 through 8 was down slightly, from 27.3 million to 27.2 million, as decreases in the upper elementary grades more than offset the gains in grades 1 through 3. A small increase—from 13,680,000 to 13,740,000—apparent in grades 9 through 12.

School enrollment is significantly influenced by trends in the birth rate. Data from the National Center for Health Statistics, U.S. Public Health Service, show that the number of live births in this country attained an all-time high of 4.3 million in 1961. They then declined precipitously for more than a decade. From 1973 through 1976 the annual number of births was between 3.1 and 3.2 million, but the birth rate turned upward again in 1977. Subsequently, there have been annual increases (except in 1983)

that have raised the number of children born from 3.3 million in 1977 to 3.7 million in 1984.

This fall's increase in preprimary and early elementary school enrollment presages a new trend that will affect elementary and secondary schools for a number of years. Projections of the Center for Statistics indicate that elementary school enrollment will increase annually from the mid-1980s through the early 1990s. The new wave of pupils will then begin to have a positive effect upon enrollment at the secondary level. Annual increases in enrollment in grades 9 through 12 are expected for a number of years beginning in the early 1990s.

Enrollment in colleges and universities is being adversely affected by a continuing decline in the population of 18- to 24-year-olds. The number of persons in this age group peaked in 1981 and then began a decline that is expected to continue throughout the next decade. College enrollment in fall 1985 is estimated at 12,250,000—down less than 1 percent from the enrollment a year earlier. Only moderate decreases are projected in the number of college students between 1985 and the early 1990s. Recent trends indicate that enrollment will remain relatively high because of the increased participation of older students, part-time students, women, and some minority groups.

Nearly 2.5 million elementary and secondary school teachers were engaged in classroom instruction in the fall of 1985. This presents almost no change from the number of teachers employed a year earlier. Only minimal changes occurred at the elementary and the secondary levels. The number of public school teachers in 1985 was about 2,125,000 and the number in private schools is estimated at 340,000. About 1,425,000 were teaching in elementary schools, while about 1,040,000 were employed at the secondary level.

¹ As this edition of the *Digest* goes to press, final figures are not yet available for school years 1984-85 and 1985-86. Consequently, the education statistics for these years should be regarded as preliminary estimates.

Overall, the trend in most recent years have been for the number of public school teachers to remain relatively stable, while enrollment has been declining. The result has been a continuing improvement in the pupil-teacher ratio. In the fall of 1983 there were 18.5 pupils per teacher compared with 21.3 pupils per teacher 10 years earlier. Moreover, a study by the National Education Association² indicates that many of the public school teachers in the 1980s have spent more years in preparing for a teaching career than those who taught in previous decades. Fewer than 1 percent of the teachers in 1981 did not have a bachelor's degree, compared with 15 percent in 1961. In 1981, about 50 percent of the teachers held a master's or higher degree, compared with 23.5 percent 20 years earlier.

The average annual salary of classroom teachers in public elementary and secondary schools rose about 7 percent last year, bringing their average salary in 1984-85 to about \$23,500. A further increase to about \$25,100 is anticipated for the current school year. The average salary of the total professional instructional staff, including principals, supervisors, teachers, and other personnel, is somewhat larger—the estimates for 1984-85 and 1985-86, respectively, are \$24,600 and \$26,300. For several years salary increases have been somewhat higher than the rise in the cost of living as measured by the Bureau of Labor Statistics' Consumer Price Index. However, teachers' salaries, in terms of the purchasing power of the dollar, are lower today than they were in the early 1970s.

The number of senior instructional staff members in colleges and universities is now holding at about 700,000. This figure includes full-time and part-time faculty with the rank of instructor or above. It excludes graduate and teaching assistants. In the recent past the number of college faculty members has increased at a slightly faster rate than full-time equivalent enrollment.

The average salary of full-time instructional faculty in institutions of higher education has been increasing at an annual rate of about 7 percent recently. Increases of similar magnitude expected for 1984-85 and 1985-86 will bring average salaries for those years to

\$31,100 and 33,300 respectively. These figures are based upon 9-month teaching contracts. They do not include income from teaching in summer school or from other paid employment.

The number of high school graduates in 1985-86 is expected to total about 2,600,000. About 2,340,000 of these young people will graduate from public high schools, and about 260,000 are expected to graduate from private schools. The trend in the number of high school graduates has been downward since the peak year of 1977, when 3,154,000 persons received their diplomas.

The number of earned degrees to be conferred during the year 1985-86 is estimated as follows: 945,000 bachelor's degrees; 290,000 master's degrees; 33,000 doctor's degrees; and 74,000 first-professional degrees. The number of first-professional degrees conferred is expected to be at or near an all-time high. These figures are down slightly from their peaks, during 1984 (bachelor's), 1977 (master's), and 1973 (doctor's).

The Bureau of the Census has collected statistics over time on the educational attainment of the population in terms of school years completed. These data indicate that between 1960 and 1985 the proportion of the adult population 25 years of age and over with 4 years of high school or more rose from 41 percent to 74 percent; the percent with at least 4 years of college increased from 8 to 19 percent; and the median school years completed by persons in this age group rose from 10.5 years to 12.6 years.³

Studies by the Center for Statistics indicate that about three-fourths of the young people today can be expected to receive a regular high school diploma. About 47 percent of them (more than 62 percent of the high school graduates) can be expected to enroll at some time in a degree-credit program in a college or university. If present trends continue, 24 percent of the young people in their late teens today can be expected to earn a bachelor's degree; 7 percent, a master's degree; and nearly 1 percent, a doctorate.

Expenditures for public and private education from preprimary through graduate

² National Education Association, *Status of the American Public School Teacher, 1980-81*.

³ U.S. Department of Commerce, Bureau of the Census, *1980 Census of Population and Current Population Reports, Series P-20*.

school totaled about \$244.4 billion in 1984-85, and preliminary estimates indicate that they will reach \$261.5 billion in 1985-86. The expenditures of elementary and secondary schools are expected to total about \$159.3 billion this year, while institutions of higher education will spend about \$102.2 billion. Public schools and colleges are expected to spend about \$213.4 billion, while the outlays of privately controlled institutions can be expected to reach \$48.1 billion. Viewed in another context, the total expenditures for education during 1985-86 are ex-

pected to amount to about 6.7 percent of the gross national product.

The statistics in this introduction provide a quantitative description of the current American educational scene. Quality in education is much more difficult to assess. It is clear, however, from the large number of participants, the number of years that people spend in school, and the vast sums expended by educational institutions that the American people have a high regard for learning. Thus the current emphasis on excellence in education is likely to attract a responsive audience.

NOTE.—Adult education programs, while not separately delineated above, may provide instruction at the elementary, secondary, or higher education level.

CHAPTER I

ALL LEVELS OF EDUCATION

The purpose of this chapter is to provide a broad overview of education in the United States from prekindergarten through graduate school. It brings together material from elementary, secondary, and higher education to present a composite picture of the American educational system. It contains tables which show the total number of persons enrolled in school, the number of teachers, the number of schools, and total expenditures for education at all levels. Statistics on educational attainment, on illiteracy, and on school retention rates are also included. The final tables in this chapter were derived from the National Assessment of Educational Progress. They provide summary data of the achievements of 9-year-olds, 13-year-olds, and 17-year-olds in a variety of areas, including science, citizenship, reading, literature, music, art, social studies, and mathematics.

Figure 1 provides a graphic presentation of the structure of education in the United States. The right side of the chart indicates the three levels of education (elementary, secondary, and higher); the left gives the approximate age of persons at each level. As the chart indicates, pupils ordinarily spend from 6 to 8 years in the elementary grades, followed by 4 to 6 years of high school. The entire 12-year program is normally completed at age 17 or 18.

High school graduates may enter a junior college, a technical institution, a 4-year college or university, or a professional school. A junior college normally offers the first 2 years of a standard 4-year college program and a broad selection of terminal-vocational courses. Academic courses completed at a

junior college are transferable for credit to 4-year colleges and universities. A technical institute offers postsecondary technical training not leading to a bachelor's or higher degree.

An associate degree requires at least 2 years of college-level work, and a bachelor's degree normally can be earned in 4 years. At least 1 year beyond the bachelor's is necessary for a master's degree, while a doctor's degree usually requires a minimum of 3 or 4 years beyond the baccalaureate.

Professional schools differ widely in requirements for admission and in length of programs. Medical students, for example, must complete at least 3 years of premedical studies at a college or university before they can enter the 4-year program at a medical school. Engineering students, on the other hand, can enter an engineering school immediately upon completion of a secondary school program.

Many of the statistics in this chapter are derived from the annual and biennial surveys of the Center for Statistics. When necessary, these survey data have been supplemented by estimates prepared especially for this volume in order to make the tables as useful as possible. In addition, substantial contributions have been made by other agencies, both governmental and nongovernmental, as indicated in the source notes in the appropriate tables. The data obtained from the Bureau of the Census surveys of educational attainment, governmental finances, and school enrollment by age, race, and sex are worthy of special mention for the valuable information they provide.

Table 1.—Estimated number of participants in elementary and secondary education and in higher education: United States, fall 1985

[In thousands]

Participants	All levels (elementary, secondary, and higher education)	Public elementary and secondary schools	Private elementary and secondary schools	Institutions of higher education
1	2	3	4	5

¹ Beginning in fall 1980, data include estimates for an expanded universe of private schools. Therefore, these totals may differ from figures shown in other tables, and direct comparisons with earlier years should be avoided.

² Data for 1869-70 through 1949-50 include resident degree-credit students enrolled at any time during the academic year. Data for 1959 include resident degree-credit students enrolled during the fall term of academic year 1959-60. Data for the years 1969 through 1985 include all resident and extension students enrolled at the beginning of the fall term.

³ Estimated.

⁴ Preliminary data.

--- indicates data either not reported, not available, or not applicable.

NOTE.—Elementary and secondary enrollment includes pupils in local public school systems and in most private schools (religiously affiliated and nonsectarian), but generally excludes pupils in subcollegiate departments of institutions of higher education, residential schools for exceptional children, and Federal schools. Elementary enrollment includes a relatively small number of prekindergarten pupils. Higher education enrollment includes students in colleges, universities, professional schools, teachers colleges, and 2-year colleges. Because of rounding, details may not add to totals.

¹Includes enrollment in any type of graded public, parochial, or other private school in the regular school system. Includes nursery schools, kindergartens, elementary schools, high schools, colleges, universities, and professional schools. Attendance may be on either a full-time or part-time basis and during the day or night. Enrollments in "special" schools, such as trade schools or business colleges, are not included.

²Persons of Spanish origin may be of any race.

NOTE.—Data are based upon a sample survey of the civilian noninstitutional population.

¹ Rates for the 5th grade through high school graduation are based on enrollments in successive grades in successive years in public elementary and secondary schools and are adjusted to include estimates for private schools. Rates for first-time college enrollment include full-time and part-time students enrolled in programs creditable toward a bachelor's degree.

² Data not available.

NOTE.—Beginning with the class in the 5th grade in 1958, data are based on fall enrollment and exclude ungraded pupils. The net effect of these changes is to increase high school graduation and college entrance rates slightly.

SOURCES: U.S. Department of Education, National Center for Education Statistics, *Biennial Survey of Education in the United States: Statistics of State School Systems: Fall Statistics of Public Elementary and Secondary Day Schools*; and unpublished data.

¹ The mean delta ρ is a single number used in National Assessment to describe a group's performance. The percent correct, or the ρ , for an exercise (test item) can be expressed for the Nation as a whole or for any of the National Assessment groups. The difference between these percentages is the delta ρ for the exercise. The mean delta ρ for a group is the mean of all delta ρ 's for the group.

² Students in this group attend schools in communities with a population under 10,000 where most of the residents are farmers or farm workers.

³ Students in this group attend schools in or around cities with a population greater than 200,000 where a high proportion of the residents are on welfare or are not regularly employed.

⁴ Students in this group attend schools in or around cities with a population greater than 200,000 where a high proportion of the residents are in professional or managerial positions.

NOTE.—Data are for the following years: 1975-76—Citizenship, social studies; 1976-77—Science; 1978-79—Music, art; 1979-80—Reading/literature comprehension; 1981-82—Mathematics.

CHAPTER II

Elementary and Secondary Education

The Center for Statistics obtains statistics each fall from the State departments of education on the pupils, staff, and graduates of public schools. These data have been published annually in a series of reports entitled *Statistics of Public Elementary and Secondary School Systems*. Another annual study based upon information from State departments of education is entitled *Revenues and Expenditures for Public Elementary and Secondary Education*. This report has provided data on public school revenues by source and on expenditures by purpose.

For many years this office published comprehensive statistics on the organization, staff, pupils, and finances of public schools in the biennial report, *Statistics of State School Systems*. This publication was discontinued after 1975-76, but it is still cited in many of the historical tables in this chapter.

To provide information on public education at the local level, the Center for Statistics prepares from time to time a directory of local education agencies. This directory lists the name of each public school system, the city and county in which the superintendent's office is located, the grade span, the enrollment, and the number of schools in the system.

The Center for Statistics has also conducted several surveys of private elementary and secondary schools in recent years. The latest data on the enrollments and teachers in private schools are for the 1983-84 school year, while the statistics on high school graduates are for the previous year. Additional information on private schools has been made available by the National Catholic Educational Association.

Other recurring reports of the Center for Statistics which have appeared from time to time are the studies of preprimary education and of offerings and enrollments in high school subjects. The most recent statistics in these areas are summarized in the tables which follow. This chapter of the *Digest* also utilizes data from the National Education Association on the characteristics, subjects taught, and average salaries of public school teachers; from the Office for Civil Rights, U.S. Department of Education, on public school enrollment in special education programs for the handicapped and on enrollment by race or ethnicity; and from the College Entrance Examination Board on the Scholastic Aptitude Test scores of college-bound high school seniors.

Table 25.—Enrollment in public elementary and secondary schools, by level and by State: Fall 1981 to fall 1985

¹ Preliminary.

² Estimated.

³ Beginning in 1984 data include students enrolled in public schools on Federal bases and in other arrangements.

--- Data not available.

NOTE.—Some data have been revised from previously published figures. Because of rounding, details may not add to totals.

SOURCE: U.S. Department of Education, National Center for Education Statistics, survey of "Common Core of Data," and unpublished data.

¹ Data on population and labor force are from the Bureau of the Census, and data on personal income and national income are from the Bureau of Economic Analysis, U.S. Department of Commerce.

² Fall enrollment.

³ Data for 1970-71.

⁴ Estimated by the National Center for Education Statistics.

⁵ Prior to 1919-20, data are for the number of different persons employed rather than number of positions.

⁶ Because of a modification of the scope of "current expenditures for elementary and secondary schools," data for 1959-60 and later years are not entirely comparable with data for prior years.

⁷ Includes summer schools, community colleges, and adult education. Beginning in 1959-60, also includes community services, formerly classified with "current expenditures for elementary and secondary schools."

⁸ Excludes community colleges and adult education.

⁹ Includes supervisors, principals, teachers, and other non-supervisory instructional staff.

¹⁰ Estimated by the National Education Association.

¹¹ Excludes current expenditures not allocable to pupil costs.

¹² "A.D.A." means average daily attendance in elementary and secondary schools.

¹³ Includes interest on school debt.

¹⁴ The expenditure figure used here is the sum of current expenditures allocable to pupil costs, capital outlay, and interest on school debt.

¹⁵ Per-day rates derived by dividing annual rates by average length of term.

--- Indicates data not reported, not available, or not applicable.

NOTE.—Some of the figures for 1979-80 have been revised slightly since originally published. Because of rounding, details may not add to totals.

Past and Projected Trends in Public School Enrollment

Public elementary and secondary school enrollment in the United States reached an all-time high of 46,081,000 in the fall of 1971. It then declined in each subsequent year for the next 12 years. By the fall of 1983, enrollment had reached 39,328,000. This decrease of 6,753,000, or 14.7 percent, may be attributed to a continuing decline in the number of 5- to 17-year-olds in the population.

Enrollment in the elementary grades (kindergarten through grade 8) peaked in the fall of 1969 and then decreased annually throughout the 1970s and early 1980s. Enrollment at the high school level (grades 9 through 12), on the other hand, did not reach its peak until the fall of 1976. It then declined each year through the fall of 1981.

Enrollment decreases tended to be quite modest in the early 1970s, but they began to accelerate later in the decade. This was especially true after 1976, when enrollment in both elementary and secondary schools was declining. The decrease from the previous year was less than 1 percent a year from 1972 through 1975. In contrast it was 2 percent a year or more in 1978, 1979, and 1981.

Projections of the National Center for Education Statistics indicate that public school enrollment should reach a low of about 38.9 million in the fall of 1984, before turning upward again. By 1992, assuming that there are annual increases in the school-age population after 1984 as expected, enrollment

will probably exceed 41 million. In other words, enrollment in 1992 is expected to be fractionally higher than the 1980 figure of 40,987,000 pupils. The increase between 1985 and 1990 will be concentrated in the elementary grades. No sustained increase in high school enrollment is anticipated before the early 1990s.

As the accompanying chart, indicates, there were significant differences among the States in public school enrollment trends between 1973 and 1983. In 6 States enrollment actually increased during the decade. In 7 States there was an enrollment decrease of less than 5 percent; in 12 States, a decrease of 5 to 9.9 percent; in 8 States, a decrease of 10 to 17.9 percent; in 11 States, a decrease of 18 to 24.9 percent; and 6 States and the District of Columbia, a decrease of 25 percent or more. The changes in enrollment ranged all the way from increases of 24.0 percent in Utah and 18.2 percent in Wyoming to decreases of 31.2 percent in Delaware and 34.7 percent in the District of Columbia.

The movement of the population of the United States toward the South and the West is reflected in the school enrollment trends between 1973 and 1983. The States with an enrollment increase during this period were in the West and Southwest. Most of the States with a decrease of less than 10 percent were also in the West and the South. On the other hand, all of the States with a decrease of 18 percent or more were in the East and the Midwest.

¹ Average daily attendance of public school pupils transported as a percentage of average daily attendance.

² Estimated by the National Center for Education Statistics based on 1979–80 data reported by States and prior years' responses.

NOTE.—Because of rounding, details may not add to total.

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Common Core of Data" survey.

Table 31.—Number and percentage of public school pupils transported at public expense, and current expenditures for transportation: United States, 1929–30 to 1981–82

School year	All public school pupils ¹	Pupils transported at public expense		Expenditure of public funds

¹ Data have been revised since originally published to make them more comparable with the figures for 1981-82.

² These estimates are based on student transcript data.

--- Indicates data either not reported, not available, or not applicable.

NOTE.—Percentages in columns 3 and 5 may exceed 100.0 because a student may have been enrolled in more than one course within a subject

area during the school year. Data are based upon sample surveys and may differ somewhat from those reported elsewhere.

SOURCE: U.S. Department of Education, National Center for Education Statistics, *A Trend Study of High School Offerings and Enrollments: 1972-73 and 1981-82*.

Offerings and Enrollment in Public High Schools

Continuing a long series of studies that have appeared at intervals of about 10 or 12 years, the Center for Statistics has reported on the courses offered in grades 9 through 12 of public high schools and the number of students enrolled in those courses in 1981-82. When compared with a similar study for 1972-73, the data indicate that high school students are taking more courses than formerly. The average load was 7 courses per student in 1981-82 compared with 6 courses per student in 1972-73. There is some indication, however, that students now spend less time on each course. Some educators have pointed out that in recent years the number of periods in a school day has increased, but the amount of time devoted to each period has been shortened.

Students in 1981-82 had a wide range of courses from which to choose. The broad

fields that enrolled the largest number of students were English language arts, 17.7 million; social sciences, 15.0 million; health and physical education, 11.9 million; mathematics, 9.8 million; natural sciences, 8.3 million; and business, 5.9 million. Since the total enrollment in grades 9 through 12 was 12.7 million, it is obvious that some students enrolled in more than one course in English and in the social sciences.

The accompanying charts shows the percentage changes in total enrollment in grades 9 through 12 and in enrollments in the academic subjects between 1972-73 and 1981-82. The largest increases were in mathematics and the natural sciences, but the social sciences and English also increased at a faster rate than did the total number of students. The only academic field to lag behind the over-all growth rate was

Figure 3.—Percentage changes in enrollments in academic courses and in the total number of students in public high schools: United States, 1972-73 to 1981-82

NOTE: —Includes students in grades 9 through 12 in public high schools.

SOURCE: U.S. Department of Education, National Center for Education Statistics, *A Trend Study of High School Offerings and Enrollments: 1972-73 and 1981-82*.

foreign languages, which declined by about 4 percent.

Some interesting trends are also evident in subject areas that are not shown in the chart. Enrollment in vocational trade and industrial education more than quadrupled over the decade to approach 1.9 million in 1981-82. Enrollment in art classes rose by 43 percent; in health and physical education, by 37 percent; and in home economics, by 24 percent. On the other hand, enrollment in safety and

driver's education decreased by 39 percent, and the number of students in music courses declined by 9 percent.

For additional information and for a discussion of survey methodology, the reader may wish to consult *A Trend Study of High School Offerings and Enrollments: 1972-73 and 1981-82*. A copy of the report may be purchased for \$7.00 from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Student Perceptions of Their Teachers

A survey conducted by the Center for Statistics provides information on graduating 1982 high school seniors' perceptions of their teachers. The survey also asked students what characteristics they considered very important in an ideal teacher. Eighty-four percent of the students cited "enjoying teaching" and "making clear presentations" as very important characteristics of an ideal teacher. "Being patient and understanding" and "treating students with respect" were rated very important by 81 percent of the students. About two-thirds of the students felt it was important that teachers "did not talk above the students' level of comprehension." "Working students hard" and "returning school work promptly" were considered to be very important by slightly less than 40 percent of the students.

The seniors were also asked to rate their teachers on these criteria. Only 22 percent said that they had few or no teachers who made clear presentations. As might be expected, students with overall "C" and "D" grade averages were more than twice as likely as students with "A" averages to feel that teachers did not make clear presentations (see accompanying chart). Many of the students with lower grades also felt that their teachers were not communicating at an appropriate level.

Although the large majority of students felt that many of their teachers made clear presentations, a substantial minority indicated that few of their teachers made students work hard and returned corrected school work promptly. Overall, 39 percent of the students said that few or none of their teachers made them work hard. Students in Catholic schools (29 percent) and other private schools (23 percent) were less inclined to feel that their teachers did not work them hard, compared to students in public schools (40 percent). Not only did many students feel that they were not challenged by school work, but about 38 percent reported that only a few of their teachers returned school work promptly.

Students had a tendency to react more favorably about their teachers' personalities.

Only one-fifth of the students felt that few or none of their teachers enjoyed teaching. Only one-third of the students reported that most of their teachers were not patient and understanding. Slightly more, or about 38 percent of the students, said that only a few of their teachers treated everyone with respect.

The most favorable responses about instructional staff were elicited with regard to their concern for the future of their students. Only 6 percent of the students said few or none of their teachers cared about their students' futures. However, students were much more likely to feel that their teachers did not care about their out-of-school activities. Seventy-one percent of the students said that few or none of their teachers were interested in their after-school activities.

It would appear from the student responses that parents did not show much interest in school activities. Almost 80 percent of the students said their parents had never visited their classes, and about 60 percent said their parents had never had a parent-teacher conference.

Overall, about three-fourths of the graduating seniors said that they were satisfied with their education. Students in private schools were more likely to express satisfaction than students in public schools. A high degree of satisfaction with school and teachers was associated with good grades, high performance, participation in academic programs, and high socioeconomic status.¹ In contrast, students with poor grades tended to show negative attitudes toward their education and teachers.

These data are from the Center's "High School and Beyond Study." They are based upon a 1982 follow-up survey of students who were sophomores in the spring of 1980.

¹ Academic performance was measured by a test battery administered as part of the "High School and Beyond" survey. Lower-performing students are those who scored in the lower quartile on the test battery. High-performing students are those who scored in the upper quartile on the test battery. Socioeconomic status was measured by a composite score and parental education, family income, father's occupation, and household characteristics.

Figure 4. — Attitudes of high school seniors towards teachers and education by overall grade averages: 1982

¹ Data for most years are partly estimated.

² Includes operating and nonoperating districts.

³ Data not available.

* This fall 1983 figure is from a sample survey and should not be compared directly with the data for earlier years.

NOTE.—Excludes schools not reported by level, such as special education schools for the handicapped. Schools with both elementary and sec-

ondary programs are included under elementary schools and also under secondary schools.

SOURCE: U.S. Department of Education, National Center for Education Statistics, *Statistics of State School Systems; Statistics of Public Elementary and Secondary School Systems; Statistics of Nonpublic Elementary and Secondary Schools; Private Schools in American Education*; and unpublished data.

High School Graduates: Past and Projected

The number of high school graduates in the United States reached an all-time high of 3,154,000 in school year 1976-77. Subsequently, there have been small annual decreases in the number of persons completing their high school education. The Center for Statistics estimates that about 2,600,000 young people will receive high school diplomas in 1985-86. Most high school graduations occur in May and June, but a small number of graduates, perhaps three percent of the total, receive their diplomas in the middle of the school year.

The decrease in the number of high school graduates for the past several years reflects the fact that fewer children were born in the mid-1960s than in the late 1950s and early 1960s. The trend toward fewer births continued through the mid-70s, reaching a low point between 3.1 and 3.2 million births a year from 1973 through 1976. Projections of the Center for Statistics indicate that the number of high school graduates will continue to decline in most years until they reach 2.3 million 1991-92. (See the accompanying chart.)

A good predictor of the number of high school graduates in a given year is the number of children born 18 years earlier. Currently, the number of graduates is equal to about 73 percent of the 18-year-old population,

and this relationship is expected to remain relatively stable in the years just ahead. The increase in the number of births which began in 1977 should be reflected in a new wave of larger graduating classes beginning in the mid-1990s. The Western Interstate Commission for Higher Education has projected that the number of graduates will be sharply higher beginning with the class of 1994-95.

The projected trend in the number of high school graduates over the next decade has important implications for the Nation's colleges and universities. According to reports from the Bureau of Labor Statistics, U.S. Department of Labor, between 49 and 54 percent of the new graduates in recent years have enrolled in college in the fall following high school graduation. If this proportion holds steady, the number of new graduates entering college could drop from nearly 1.6 million in 1982 and again in 1983 to about 1.2 million in 1992. In order to maintain their enrollment near current levels, many colleges and universities will need to recruit a substantial number of older and part-time students to offset the reduction in the number of new high school graduates who will be entering institutions of higher education.

Table 65.—Minimum course requirements for high school graduation, by State: November 1984¹

State	Carnegie units ^a of instruction in—										First graduating class to which these requirements apply	Notes
	All courses	English/language arts	Social studies	Mathematics	Science	Physical education/health	Electives	Other courses				
1	2	3	4	5	6	7	8	9	10	11	A task force is studying graduation requirements, including the possibility of an "advanced" diploma.	
Alabama	20	4	3	2	1	3½	6½		1985		Social studies options: 3 units or 2 units social studies and 1 practical arts. Science and mathematics: may be 3 science and 2 math, or 2 science and 3 math.	
Alaska	21	4	3	2	2	1	9	½ essentials of free enterprise system	1985		The State board has published "Model Graduation Requirements" to be used by local districts as a guide. These include specifics in core subjects plus computer studies and foreign language.	
Arizona	20	4	2	2	2	2	9½	½ fine arts	1987		Local boards determine requirements. State has constitutional prohibition against State requirements.	
Arkansas	20	4	3	(*)	(*)	1	6½		1986		Electives must include life skills seminar, or a test can be taken and passed in lieu of the seminar.	
California	13	3	3	2	2	2		1 fine arts or foreign language	1987		22 units required for graduates through 1985-86 school year.	
Colorado	---	---	---	---	---	---	---		---		Humanities will increase to two units after 1988 with a total requirement of 21 units. A practical art may substitute for one unit of humanities.	
Connecticut	20	4	3	3	2	1	6	1 arts or vocational education	1986		One year of mathematics may be computer technology.	
Delaware	19	4	3	2	2	1½	6½		1987		One year of social studies must be U.S. history or half U.S. history and half American government.	
District of Columbia	20½	4	2	2	2	1½	8	1 foreign language	1985		The State board regulations were approved/signed by the governor in September 1983.	
Florida	23	4	2	2	2	1½	1½	1 foreign language, 9 specialized preparation	1987		Legislative requirements in effect for many years. Local districts determine remaining requirements.	
Georgia	21	4	3	3	3	1	9	½ practical or exploratory vocational education, ½ performing fine arts	1988		Additional core subject credit is a requirement for graduates in 1985. (Graduates in 1985 and 1986 need 18 units to graduate.)	
Hawaii	20	4	4	2	2	2	8	1 fine arts, vocational education, or computer technology	1988		Graduates in 1988 need 22 units.	
Idaho	20	4	2	2	2	1½	6	½ guidance	1988		American history is required. All students must pass computer proficiency standards.	
Illinois	16	3	2	2	2	4½	2½	½ reading, ½ speech, ½ consumer education, 1 humanities	1989		Possible changes (late 1984).	
Indiana	19½	4	2	2	2	1½	8	½ consumer education, 1 art, foreign language, music, or vocational education	1988		Legislative requirements in effect for many years. American history required. Local boards determine additional requirements.	
Iowa	20	4	1½	2	2	1	8		1986		Legislative requirements in effect for many years. Local boards determine additional requirements. The State board, in January 1984, published graduation requirement guidelines which local districts are urged to incorporate.	
Kansas	20	4	3	2	2	1	7	1 additional mathematics, science, social studies, or vocational education	1987		Requirements took effect immediately for all graduates.	
Kentucky	20	4	2	3	2	1			1989		In July 1984, new requirements were approved which will be field-tested for two years.	
Louisiana	23	4	3	3	3	2	7½	½ computer literacy	1989			
Maine	16	4	2	2	2	1½	3½	1 fine arts	1989			
Maryland	20	4	3	3	3	2	5	1 fine arts, 1 practical arts				
Massachusetts			1			4						
Michigan				½								
Minnesota	20	4	3	1	1	1½	9½		1982			
Mississippi	16	3	2½	1	1	1	8½		1970			

Table 65.—Minimum course requirements for high school graduation, by State: November 1984¹—Continued

State	Carnegie units ^a of instruction in—								First graduating class to which these requirements apply	Notes
	All courses	English/foreign language arts	Social studies	Mathematics	Science	Physical education/health	Electives	Other courses		
1	2	3	4	5	6	7	8	9	10	11
Missouri: Standard diploma College preparatory studies certificate	22 24	3 4	2 3	2 3	2 3	1 1	10 8	1 practical arts, 1 fine arts 1 practical arts, 1 fine arts	1988	Available to 1985 qualifying graduates. For college preparation, specific core subjects must be taken, and 3 electives must be in advanced courses. Core requirements in effect for several years. State board recently raised the total: 1985 graduates need 18 units; 1986 graduates need 20. Social studies requirement has 2 alternatives. For graduation, 200 credit hours required, with at least 80% in core curriculum courses. The State board is conducting hearings to define core courses.
Montana	20	4	1½ or 2	2	1	1	10½ or 10		1986	
Nebraska									1991	
Nevada	20 19½	3 4	2 2½	2 2	1 2	2½ 1½	9½ 4	½ arts; ½ computer science; 3 from 2 of the following: arts, foreign language, practical arts, and vocational education	1985 1989	
New Jersey	18½	4	2	2	1	4	4	1 fine, practical or performing arts; ½ career exploration		Requirements have been in effect for a number of years.
New Mexico	21	4	2	2	2	1	9	1 practical arts or fine arts	1987	In June 1994, the State board required that all students must achieve computer literacy prior to graduation.
New York: Local diploma	18½	4	4	2	3	½	varies	1 art and/or music 3 to 5; A sequence of specific courses must be chosen by the student; choices vary for the two different diplomas	1989	½ is health only; 2 noncredit units of physical education beyond the total.
Regents' diploma	18½	4	4	2	2	½	varies		1989	Competency tests are required of all students. By 1991, areas covered will include reading, writing, math, American history and government, science, and global studies. For Regents' diploma, comprehensive exams are required in most subjects.
North Carolina	20	4	2	2	2	1	9		1987	
North Dakota	17	4	3	2	2	1	5		1984	
Ohio	18	3	2	2	1	1	9		1988	
Oklahoma: High school graduation requirement College preparatory	20 15	4 4	2 2	2 3	2 2		10	4 from: foreign language, computer science, economics, English, geography, government, math, history, sociology, science, speech, psychology	1987 1988	Slight variations between 2-4-year and junior colleges. If foreign language elected, 2 years in same language.
Oregon	22	3	3½	2	2	2	8	½ career development, 1 applied arts, fine arts, or foreign language	1988	
Pennsylvania	31	4	3	3	3	1		2 arts and humanities	1989	Local boards determine the remaining 5 units.
Rhode Island: Center bound College bound	16 18	4 4	2 2	2 3	2 2	2	6 4	2 foreign languages; ½ arts; ½ computer literacy	1989	
South Carolina	20	4	3	3	2	1	7	½ computer studies, ½ fine arts	1987	
South Dakota	30	4	3	3	2	2	8		1989	Increased total number of requirements being phased in: 16 through 1986; 18 in 1987; and 19 in 1988.
Tennessee	20	4	1½	2	2	1½	9		1987	
Texas: High school graduation requirements	21	4	2½	3	2	2	7	½ economics/free enterprise	1986	1½ units of physical education and ½ unit of health education for both programs.

Table 65.—Minimum course requirements for high school graduation, by State: November 1984¹—Continued

State	Carnegie units ² of instruction in—								First graduating class to which these requirements apply	Notes
	All courses	English/language arts	Social studies	Mathematics	Science	Physical education/health	Electives	Other courses		
1	2	3	4	5	6	7	8	9	10	11
Additional requirements	22	4	2½	3	3	2	3	½ economics/free enterprise, 2 foreign languages, 1 computer science, 1 fine arts	1988	
Utah	24	3	3	2	2	2	9	1½ arts, 1 vocational education, ½ computer science	1988	The State board makes specific course recommendations for college entry, vocational, etc.
Vermont	15½	4	3	3	3	1½	6	1 additional science or mathematics	1989	
Virginia	20	4	3	2	2	2	4	3 foreign languages	Available for 1985 graduates	
Standard diploma	22	4	3	3	3	2	5½	1 occupational education	1989	1 additional course will be required beginning in 1991.
Advanced studies diploma							7	1 applied arts, fine or performing arts or second language	1989	
Washington	18	3	2½	2	2	2	7	½ computer science	1989	Electives are the option of local school districts. The State recommends that districts require a total of 22 units.
West Virginia	21	4	3	2	1	2	7		1989	Requirements in effect for a number of years. Local boards determine remaining requirements to reach the minimum of 18 total units.
Wisconsin	13½	4	3	2	2	2				
Wyoming	18	1								

¹ Includes updated information for some States received in August 1985.

² The Carnegie unit is a standard of measurement that represents one credit for the completion of a 1-year course.

³ Student must complete a total of five units of mathematics and science.

*Includes revenue receipts from local and intermediate sources, gifts, and tuition and fees from patrons.

--- Indicates data either not reported, not available, or not applicable.

NOTE.—Excludes revenue receipts for State and intermediate education agencies. Because of rounding, details may not add to totals.

SOURCE: U.S. Department of Education, National Center for Education Statistics, preliminary data from the "Common Core of Data" survey.

¹ Includes expenditures for summer schools, adult education, community services, postsecondary vocational education, and services to private school pupils funded by local school districts.

² Total based on data reported by the National Education Association and estimates of the National Center for Education Statistics.

³ Estimated by the National Center for Education Statistics.

¹ Prior to 1959-60, items included under "other school services" were listed under "auxiliary services," a more comprehensive classification which also included community services.

² Prior to 1959-60, data shown for adult education represent combined expenditures for adult education, summer schools, and community colleges.

³ Data not available.

⁴ Prior to 1969-70, excludes capital outlay by State and local schoolhousing authorities.

⁵ Less than 0.05 percent.

NOTE.—Beginning in 1959-60, includes Alaska and Hawaii. Because of rounding, details may not add to totals. SOURCES: U.S. Department of Education, National Center for Education Statistics, *Statistics of State School Systems*; and special tabulation from the "Common Core of Data" survey.

CHAPTER III

COLLEGE AND UNIVERSITY EDUCATION

In 1984-85 there were 3,331 colleges, universities, and branch campuses in the United States. The largest numbers of institutions were concentrated in the most populous States—New York with 300 and California with 289 ranked first and second, respectively. Small or sparsely populated States like Delaware, Nevada, and Wyoming had the smallest number (8 each).

Despite the growth in the number of publicly controlled institutions in recent years, more than one-half of the colleges and universities are still controlled by private organizations, including religious denominations, professional organizations, and groups of public-spirited persons. However, the public colleges and universities tend to be much larger than their privately controlled counterparts. About 78 percent of all college students attend public institutions.

A salient characteristic of higher education in this country is its diversity. American colleges and universities offer a wide range and great variety of programs. For example, a junior college usually offers only the first 2 years of training at the college level, but a university normally offers a full undergraduate course in the liberal arts, graduate work leading to the doctorate, and courses preparing for entrance into at least two or three of the learned professions. Between these two extremes are numerous colleges which reflect local needs and purposes.

Higher education has become increasingly accessible to all segments of the population. The growth of public junior colleges and other low-cost public institutions means that the expenses of the students attending these institutions can be held to a minimum. The Basic Educational Opportunity Grant Program, Guaranteed Student Loan Program, and other Federal programs have also attracted many students to higher education who otherwise would have found it difficult to finance a college education.

A less optimistic sidelight to higher education is that most American colleges and universities, faced with rising costs, have found

it necessary to increase their basic student charges over time. Thus the typical college student usually finds that his expenses for tuition, fees, room, and board are higher when he returns to school in the fall than they were in the preceding year. How to raise fees without losing the students they would like to attract is a growing problem for college administrators.

The Center for Statistics conducts an annual higher education general information survey (HEGIS) in which it obtains data on the institutional characteristics of colleges and universities; enrollment; faculty and faculty salaries; earned degrees conferred; and finances, including revenues, expenditures, and property. These data are published in the following reports: *Education Directory*, *Colleges and Universities*; *Fall Enrollment in Colleges and Universities*; *Faculty Salaries, Tenure, and Benefits*; *Earned Degrees Conferred*; *Associate Degrees and Other Formal Awards Below the Baccalaureate*; and *Financial Statistics of Institutions of Higher Education*.

From time to time additional information is requested in the HEGIS survey. Among the data items that have been collected and reported on a recurring, but not an annual, basis are the following: residence and migration of college students, enrollment for advanced degrees, employees of institutions of higher education, and physical facilities.

This chapter provides an overview of the latest available statistics from the HEGIS reports. It also makes available in numerous instances historical data that enable the reader to observe long-range trends in American higher education. In addition, it provides summary data from the Bureau of the Census on the characteristics and majors of college students; from the National Research Council on the backgrounds of recipients of doctor's degrees; and from the Equal Employment Opportunity Commission on the racial/ethnic group, academic rank, and sex of college faculty members.

Table 77.—Total enrollment in institutions of higher education, by attendance status, sex of student, control of institution, and State: Fall 1983

State or other area	Total enrollment	Attendance status		Sex of student		Control of institution

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Fall Enrollment in Colleges and Universities, 1983" survey.

TRENDS IN COLLEGE ENROLLEMENT: 1973 TO 1983

Each fall the Center for Statistics conducts a survey of enrollment in colleges, universities, and professional schools throughout the country. In October each year the Bureau of the Census, in its current population survey, obtains data on the demographic characteristics of college students. When the statistics for fall 1983 are compared with those a decade earlier, some interesting trends in college enrollment emerge.

According to the surveys, college enrollment increased from 9.6 million in fall 1973 to 12.5 million in fall 1983, an increase of about 30 percent over the past decade. As the accompanying chart indicates, however, there were major differences in the rate of increase in college attendance among various groups represented in the surveys.

Growth rates were quite high for black and other races, persons 25 years old and over, students in 2-year institutions, part-time students, and women. They were relatively low for men, full-time students, persons 18 to 24 years old, students in universities and other 4-year institutions, and white students. The rate of growth was slightly above average for students in publicly controlled institutions and somewhat below average for those in private colleges and universities.

More detailed information on college enrollment may be found in the CS report *Fall Enrollment in Colleges and Universities* and in the Bureau of the Census reports, *School Enrollment—Social and Economic Characteristics of Students*.

Figure 6.—Percentage increases in the enrollment of college students with selected characteristics: United States, fall 1973 to fall 1983

SOURCES: Data by race and by age are derived from the current population surveys of the Bureau of the Census, U.S. Department of Commerce. All of the other statistics are from the fall enrollment surveys of the National Center for Education Statistics, U.S. Department of Education.

¹ Institutions ranked by size of total enrollment.

² Publicly controlled institutions are identified by a "1"; privately controlled, by a "2."

³ The types of institutions are identified as follows: "1", universities; "2", other 4-year institutions; "3", 2-year institutions.

⁴ Totals for the United States and the 100 largest colleges include estimates for nonrespondents.

⁵ Data not available.

¹ New students are those students who are enrolled at the reporting institution for the first time at each of the following levels: undergraduate, graduate, first-professional, or unclassified.

² "Students enrolled in State" are all of the new students reported by the institution attended; i.e., all immigrants and "remaining" students (includes foreign students).

³ "Student residents of State" are all students from a State in which they were residing when first admitted to the reporting institution at the current student level.

⁴ "Students remaining in State" are students who attend institutions in their home State.

⁵ The immigration exceeds the outmigration by the number of students enrolled from outside the United States.

NOTE.—Data for U.S. Service Schools are included in State totals.

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Residence and Migration of College Students, Fall 1981" survey.

¹ These institutions have a significant level of activity in doctoral-level education as measured by the number of doctoral recipients and the diversity in doctoral-level program offerings.

² These institutions have diverse post-baccalaureate programs, but do not engage in significant doctoral-level education.

³ These institutions primarily emphasize general undergraduate education.

⁴ These baccalaureate or post-baccalaureate institutions are characterized by an emphasis in one field of study, such as business or engineering.

⁵ These institutions confer at least 75 percent of their degrees and awards below the bachelor's degree level.

⁶ These institutions are new additions to the Higher Education General Information Survey universe (not necessarily newly organized). When degree and award data become available, they will be reclassified.

-- Indicates data either not reported, not available, or not applicable.

Two-Year Colleges: Number of Institutions and Enrollment Trends

Over the past 20 years the 2-year colleges have been the fastest growing segment of American higher education. Typically these institutions offer the first two years of college level work as well as job-oriented instruction designed to prepare students for immediate employment. They do not grant bachelor's degrees, but they frequently do confer associate degrees or other awards below the baccalaureate. Many of these institutions are also referred to as community or junior colleges.

In the fall of 1963 there were 634 2-year colleges with an enrollment of 845,000 students. In 1973 the number of institutions had grown to 1,140 (counting each branch campus as a separate institution), and their enrollment had increased dramatically to 3,010,000. By 1983, with the addition of a number of schools accredited by the National Association of Trade and Technical Schools, the institutions had reached 1,271 (again counting branch campuses separately), and their enrollment had risen to 4,726,000.

Through the years there have been substantial increases in the proportion of college students enrolled in 2-year colleges. In 1963 approximately 18 percent of all college students were enrolled in these institutions. The

corresponding percentages in 1973 and 1983 were 31 and 38 percent, respectively. The 2-year colleges have consistently enrolled even larger proportions of first-time freshmen. The share of first-time freshmen enrolled in 2-year institutions rose from about 30 percent in 1963 to 52 percent in 1973 and to 54 percent in 1983. These trends are portrayed graphically in the accompanying chart.

In the fall 1983, 2-year colleges enrolled 35 percent of the men and 40 percent of the women in institutions of higher education. They accounted for 25 percent of the full-time and 56 percent of the part-time students. Forty-six percent of the students in publicly controlled and 10 percent of those in privately controlled institutions attended 2-year colleges.

In spite of the decreases in the college-age population projected for the next decade, the outlook for many of the 2-year colleges is bright. Those with low tuition, convenient location and programs and schedules geared to the needs of part-time and older students are likely to attract an increasing share of total college enrollment. Projections of the Center for Statistics indicate that, by 1993, 40 percent of all college students are expected to be enrolled in 2-year colleges.

Figure 7.—Percent of all college students and of first-time freshmen enrolled in 2-year colleges: United States, fall 1963 to fall 1983

* This estimate was derived from data on first-time degree-credit students in fall 1963.

NOTE.—Beginning in 1973, data include students in 2-year branches of universities and other 4-year institutions.

¹ Data on the number of institutions and their enrollment are as reported in "Fall Enrollment in Colleges and Universities" surveys.

² The large increases in 1980 and 1981 are due to the addition of schools accredited by the National Association of Trade and Technical Schools.

NOTE.—Beginning in 1972, 2-year branches of universities and other 4-year institutions and the enrollment in those branches are included.

¹ These institutions have a significant level of activity in doctoral-level education as measured by the number of doctoral recipients and the diversity in doctoral-level program offerings.

² These institutions have diverse postbaccalaureate programs, but do not engage in significant doctoral-level education.

³ These institutions primarily emphasize general undergraduate education.

⁴ These baccalaureate or postbaccalaureate institutions are characterized by an emphasis in one field of study, such as business or engineering.

⁵ These institutions confer at least 75 percent of their degrees and awards below the bachelor's degree level.

⁶ These institutions are new additions to the Higher Education General Information Survey universe (not necessarily newly organized). When degree and award data become available, they will be reclassified.

SOURCE: U.S. Department of Education, National Center for Education Statistics, "Earned Degrees Conferred" surveys.

NOTE.—Beginning in 1982-83, the taxonomy used to collect data on earned degrees by major field of study was revised. The figures for earlier years have been classified when necessary to make them conform to the new taxonomy. Data for 1982-83 are subject to slight revision.

Earned Degrees Received by Women

In the year ending June 30, 1982, women received 50.3 percent of the bachelor's degrees conferred in the United States. Even though the number of women enrolled in college has exceeded the number of male college students since the fall of 1979, this was the first time since 1946 that more than 50 percent of the bachelor's degree recipients were women. From the data available in the Center for Statistics, extending all the way back to 1870, it appears that the number of women receiving bachelor's degrees had exceeded the number of male graduates only three times prior to 1982. Degree conferrals in all three of those years—1944, 1945, and 1946—were strongly influenced by the mobilization associated with World War II and its aftermath.

Women received 50.8 percent of the master's degrees conferred in 1982. Only four times prior to 1982 had the number of women receiving master's degrees exceeded the number of men. Three of these years were the war-related years of 1944, 1945, and 1946. The fourth year was 1981, when women received 50.3 percent of the master's degrees conferred.

As the accompanying chart indicates, the proportion of degrees conferred upon

women has risen sharply at all levels over the past two decades. Women received about two-fifths of the bachelor's degrees in 1962 compared with more than one-half in 1982. They received about one-third of the master's degrees in 1962 compared with more than one-half 20 years later. The upward trend is even more pronounced at the doctoral and first-professional degree levels. Women received three times as many doctor's degrees proportionally in 1982 as they did 20 years earlier. And their share of the first-professional degrees conferred was nine times as great in 1982 as in 1962.

In order to achieve this impressive growth record, women have not only continued to major in substantial numbers of traditional fields like education, nursing, languages, and the arts, but they have also moved in ever-increasing numbers into fields like business, engineering, law, and medicine, which were once dominated by men. In 1982 women received 479,600 bachelor's, 150,000 master's, 10,500 doctor's, and 19,800 first-professional degrees. This may be compared with the following degrees conferred upon men: 473,400 bachelor's, 145,500 master's, 22,200 doctor's, and 52,200 first-professional degrees.

Figure 8.—Percent of earned degrees received by women: United States, 1962, 1972, and 1982

NOTE.—Data are for the 12-month periods ending June 30 of the years shown.

*Includes degrees in general English, English literature, comparative literature, classics, and creative writing.

NOTE.—Although a strenuous effort has been made to provide a consistent series of data, minor changes have occurred over time in the way degrees are classified and reported. Any degrees classified in early surveys as "first professional" are included above with bachelor's degrees;

any degrees classified as "second professional" or "second level" are included with master's degrees. Data for all years are for 50 States and the District of Columbia.

¹ From 1869-70 through 1963-64, first-professional degrees are included with bachelor's degrees.

² Prior to 1965-66, some master's degrees in fields such as library science and social work were counted as first-professional degrees and are reported in column 3.

--- Indicates data either not reported, not available, or not applicable.

NOTE.—Beginning in 1959-60, includes Alaska and Hawaii.

¹ Includes Ph.D., Ed.D., and comparable degrees at the doctoral level. Excludes first-professional degrees, such as M.D., D.D.S., and D.V.M.

² Includes 315 degrees in computer sciences and other or unspecified fields not shown separately.

³ Within the racial/ethnic category, mathematics is included under physical sciences.

⁴ Within the racial/ethnic category, physical sciences includes mathematics and computer sciences.

⁵ Within the racial/ethnic category, business is included under other professional fields.

⁶ Within the racial/ethnic category, other professional includes business and other fields.

NOTE.—The above classification of degrees by field differs somewhat from that in most publications of the National Center for Education Statistics. The major differences are that history is included under humanities rather than social sciences, and psychology is included under social sciences. The number of degrees also may differ slightly from that reported in the NCES survey of Earned Degrees Conferred. Because of rounding, percents may not add to 100.0.

¹ Includes Ph.D., Ed.D., and comparable degrees at the doctoral level. Excludes first-professional degrees, such as M.D., D.D.S., and D.V.M.

² Includes 285 degrees in computer sciences and 22 degrees in other or unspecified fields not shown separately.

³ Less than 0.05 percent.

⁴ Within the racial/ethnic category, mathematics is included under physical sciences.

⁵ Within the racial/ethnic category, physical sciences includes mathematics and computer science.

⁶ Within the racial/ethnic category business is included under other professional fields.

⁷ Within the racial/ethnic category, other professional includes business and other fields.

NOTE.—The above classification of degrees by field differs somewhat from that in most publications of the National Center for Education Statistics. The major differences are that history is included under humanities rather than social sciences, and psychology is included under social sciences. The number of degrees also differs slightly from that reported in the NCES survey, "Earned Degrees Conferred." Because of rounding, percents may not add to 100.0.

¹ Tuition and fees received from veterans under Public Law 550 are reported under student fees and not under income from the Federal Government.

² Income from the Federal Government for research at agricultural experiment stations administered by land-grant institutions is included under Federal Government "other purposes," not under "research." Beginning in 1975-76, data include independent operations (Federally Funded Research and Development Centers).

³ Data not separately collected.

⁴ Includes Federal aid received through State channels and regional compacts, through 1950-60.

⁵ Income from State and local governments tabulated under "State governments."

⁶ Beginning in 1969-70, the private grants represent nongovernmental revenue for sponsored research and other sponsored programs.

⁷ Specifically designated or earmarked funds.

⁸ Does not include interfund transfers.

⁹ Includes funds functioning as endowment; increase calculated on book value.

¹⁰ Includes data either not reported, not available, or not applicable.

¹¹ Because of rounding, details may not add to totals.

NOTE.—Because of rounding, details may not add to totals.

Rise in Tuition Costs Exceed Inflation Trends

While college tuition, room, and board charges have risen substantially in the past decade, only in the last 5 years have they exceeded the rate of inflation.* For the 1985-86 academic year, annual tuition, room, and board charges are estimated at \$3,630 for students in public colleges and universities and \$8,830 for students at private institutions. Since 1975-76, college costs have risen 118 percent at public institutions and 141 percent at private colleges, compared to an increase in inflation of 97 percent. Today, public college students pay an average of \$1,040 a year in tuition, \$1,290 for board, and \$1,300 for lodging. In comparison, students at private colleges pay \$5,720 for tuition, \$1,530 for board, and \$1,580 for lodging. Thus, most of the large difference in the cost of attending public and private colleges is in tuition charges.

Not only is there a large variation in charges between public and private institutions, but the disparity has been increasing. The student charges are highest in private universities, which average \$11,100. They have escalated 25 percent over the past 10 years after adjustment for inflation. Charges at other private 4-year colleges have risen by 26 percent to \$8,480. Charges at public universities are \$4,156, with an increase of 8 percent over the past 10 years after adjustment, for inflation, and costs at other public 4-year colleges have risen 14 percent to about \$3,750. In contrast, charges at public 2-year colleges are not only the lowest at \$3,000 but have increased only 9 percent over the last five years. The relatively low

charges at public 2-year colleges help to provide college opportunities to lower income students and enable workers to upgrade their skills at a moderate cost.

Since 1980-81, tuition, room, and board charges have increased at a faster rate than inflation (see figure 9, below). These latest years may be regarded as a "catch-up" period because during the academic years 1977-78 to 1980-81 the increase in college costs were lower than the accelerating inflation rate. After 1980-81, as the inflation rate began to drop, large increases in student charges persisted, particularly at private colleges. In 1981-82, the costs at public and private colleges rose by 13 percent over the previous year, while the inflation index dropped to 9 percent. The inflation rate fell to 4 percent during the 1982-83 academic year, but college costs still went up by 10 percent at public institutions and by 12 percent at private colleges. Annual increases for 1983-84, 1984-85, and 1985-86 have averaged about 7 percent for public colleges and 8 percent for private colleges. Both of these figures are substantially above the annual rate of inflation, which averaged between 3 and 4 percent from 1983 to 1985.

There is a natural tendency for college costs to lag behind changes in inflation rates because costs are often fixed months in advance of the academic year, and college officials are reluctant to change student charges in midyear. For example, inflation rates peaked during the 1979-80 academic year, but college cost increases peaked two years later, in 1981-82. Also, many colleges that previously kept increases for faculty salaries low are now increasing salaries.

* Inflation as measured by the Consumer Price Index.

Figure 9.—Percentage changes in public and private college costs compared to changes in the Consumer Price Index: United States, 1975-76 to 1985-86

Note.—Data for 1985-86 are estimated.

¹ Estimated.
^a Data have been revised since originally published.
^b Preliminary.

NOTE.—Data are for the entire academic year and are average charges paid by students. Tuition and fees were calculated on the basis of full-time equivalent students. Room and board were based on full-time students. The data have not been adjusted for changes in the purchasing power of the dollar.
 SOURCES: U.S. Department of Education, National Center for Education Statistics, *Projections of Education Statistics* and special tabulations from the *National Characteristics of Colleges and Universities* and "Fall Enrollment in Colleges and Universities" surveys.

High family income ³	15	5	9	8	14	13	14	21

¹ Annual income of less than \$12,000.

² Annual income between \$12,000 and \$24,999.

³ Annual income of \$25,000 or more.

⁴ Used parental finances.

NOTE.—This tabulation includes all forms of financial aid: Federal, State, local, institutional, and private. Data are based upon a sample survey of

high school seniors in 1980 who were enrolled in postsecondary education institutions during the academic year 1981-82. Because of the size of the sample, students in private 2-year colleges are not shown separately, but they are included in the over-all totals. Because of rounding, percentages may not add across to 100.

SOURCE: U.S. Department of Education, National Center for Education Statistics, "High School and Beyond" survey.

*Includes expenditures for scholarships and fellowships which had previously been reported separately as a component of student-aid expenditures.

NOTE.—A change in the reporting format has made item by item comparison with data for years preceding 1974-75 somewhat unwieldy. (See the previous table.)

¹ Data were previously a separate component of current-fund expenditures, not included in educational and general expenditures.

² Before 1968-69, included with educational and general.

³ Before 1968-69, included with educational and general. Primarily federally funded research and development centers.

⁴ Less than 0.05 percent.

NOTE.—Because of rounding, details may not add to totals.

Endowment Trends in Institutions of Higher Education

One of the numerous sources that colleges and universities depend on for revenue is income from endowment funds. These permanent accounts generate income to support a variety of education programs, such as scholarships for students or salaries for certain professors. The purpose of a donation to an endowment fund is frequently designated by the benefactor. While the national proportion of all current-fund revenues received from endowments is only about 2.2 percent, some institutions obtain 20 percent or more of their current-fund revenues from this source.

The market value of endowment funds at the Nation's colleges increased 61 percent during the 10-year period from 1972 to 1982. The endowment of public institutions rose from \$2.4 billion in 1972 to \$4.5 billion in 1982 while endowment of private institutions increased from \$12.8 billion to \$19.9 billion (see accompanying chart). Despite the increase in endowments, there was a marked decline in their real value when adjusted for inflation. Overall, the real value of endowment funds declined about 25 percent during the 10-year period. Virtually all of the decline occurred between 1972 and 1978. The relatively poor performance of bond investments during these years was an important factor in the decline. Changes in real value of endowment funds also tend to mirror the swings in the stock market. For example, the sharp drop of college endowments in 1974 may be attributed in part to falling stock market prices.

At the end of the 1982 fiscal year, 1,919 institutions of higher education had endowment funds totaling \$24.4 billion. Four-year

colleges were much more likely to have endowments than 2-year colleges. However, on a percentage basis, the endowments of 2-year colleges have been increasing more rapidly. A total of 1,178, or about 83 percent of all private 4-year colleges, had endowment funds. The 608 public colleges with endowment funds accounted for 41 percent of all public institutions.

Although a large number of colleges held endowment funds, much of the money was concentrated in a relatively small number of institutions. The 10 universities with the largest endowments in 1982 were:

In millions	
University of Texas at Austin	\$1,701
Harvard University (Mass.)	1,617
Columbia University, Main Division (N.Y.)	770
Stanford University (Calif.)	770
Yale University (Conn.)	747
Princeton University (N.J.)	687
Massachusetts Institute of Technology	467
University of Rochester (N.Y.)	429
University of Chicago (Ill.)	394
Northwestern University (Ill.)	373
Total	\$7,957*

*Because of rounding, details do not add to total.

Together, these 10 universities held endowments with a market value of \$8.0 billion, or about 32.6 percent of all college endowment funds. Nine of the 10 institutions listed above are privately controlled. The only public institution in the top 10 is the University of Texas at Austin. This university not only had the largest endowment of any public college, but it alone accounted for about one-third of the endowment of all public institutions. The increase in the endowment fund at the University of Texas was one of the reasons that the real value of endowments of all public institutions fell at a slower rate than that of private institutions.

CHAPTER IV

Adult and Vocational Education

The American people have come to realize more and more that education can be a life-long experience. The result has been an increased emphasis upon adult education to meet the needs of persons beyond the traditional age for attendance at regular educational institutions. Furthermore, there has been a growing awareness of the desirability and feasibility of training young people for useful employment as part of their formal education. This has resulted in a markedly upward trend in enrollments in and expenditures for vocational education programs at the secondary and postsecondary levels.

The Center for Statistics has recognized the importance of adult and vocational education by issuing a number of publications in these areas. The most recent is the report *Participants in Postsecondary Education: October 1982*, which provides data on the number of persons 16 years of age and over participating in academic, vocational, and continuing education programs. The Center also conducted several major surveys of adult education between 1969 and 1981. This chapter summarizes the survey data on the demographic characteristics of participants in adult education and on the types of programs in which they were enrolled. It also contains the latest information available from

the survey of participants in adult basic and secondary education programs.

The Center also conducted for a number of years a biennial survey of postsecondary (noncollegiate) schools offering occupational programs. Summary tables in this chapter provide statistics on the number of these schools and on their program offerings, enrollment, and instructional staff. It should be noted that these tables do not include enrollment in occupational or nondegree-credit programs offered by colleges and universities. Enrollments in these programs, which have grown rapidly in recent years (especially in public 2-year colleges), are included in appropriate tables in chapter III.

The Federal Government's interest in vocational education dates back at least as far as the passage of the Smith-Hughes Act of 1917. For many years the Division of Vocational and Technical Education in the U.S. Office of Education (predecessor of the U.S. Department of Education) compiled statistics on federally aided vocational programs. Chapter V of this report contains a synopsis of significant Federal legislation affecting vocational education. It also provides data on Federal funds for vocational and adult education administered by the Department of Education.

Unemployed	416	4.5	321	8.5	234	4.5

¹ Academic students pursued coursework, either full- or part-time, for the purpose of obtaining an undergraduate, graduate, or professional degree.

² Vocational students took coursework (either full- or part-time) in an occupational or technical field for the purpose of obtaining a vocational credential, such as a vocational certificate, occupational license, or other vocational diploma or degree.

³ Continuing education students were postsecondary education participants not otherwise classified as academic or vocational students who

were taking college credit courses but not seeking a degree or who were taking noncredit courses for job improvement, personal development, or social/recreational purposes (excluding adult basic education courses to improve basic skills in reading, writing, or arithmetic).

NOTE.—Data are based upon a sample survey of the civilian noninstitutional population. Because of rounding, details may not add to totals.

SOURCE: U.S. Department of Education, National Center for Education Statistics, *Participation in Adult Education, 1981*.

Adult Education

According to the Center for Statistics, there was an all-time high of 21,252,000 participants in adult education* in 1981. These participants represented 12.8 percent of the total adult population (17 years old and over) in the U.S. These figures come from the Bureau of the Census survey of May 1981, part of its Current Population Survey of 58,000 households.

Of the over 21 million participants, men made up 44 percent while 56 percent were women. The two age groups with the largest number of participants for both males and females were the 25- to 34-year-olds (largest) and the 35- to 44-year-olds (next largest). Of the total 9.3 million male participants, 36.2 percent (3.4 million) fell in the 25 to 34 age group, and 22.2 percent (2.1 million) were 35 to 44 years of age. Of the total 11.9 million female participants, the 25 to 34 age group (4.1 million) accounted for 34.7 percent, while women 35 to 44 years of age (2.4 million) represented 20.5 percent of all female participants. Participants under 25 and those 45 and over accounted for less than 20 percent of the total number of people in adult education.

Whites comprised 87.9 percent of the adult education participants, blacks 6.1 percent, and Hispanics 3.6 per-

cent of the total. All other races accounted for 2.4 percent.

By family income, there was a relatively large number of persons in the \$25,000 to \$49,999 income bracket. This group, constituting 18.3 percent of the adult population, accounted for 34.4 percent of the participants in adult education.

Adult education participants took a total of 37.4 million courses in 1981. Almost 23 percent of the courses were in the field of business. Health-related courses accounted for nearly 14 percent of the courses and engineering and engineering technology made up nearly 10 percent.

Additional information on the age and income level of participants and on the courses of study appears in the accompanying chart.

The survey of adult education also includes information on labor force status, occupation, years of school completed, type of area, and region of participants in adult education. These data are summarized in *Participation in Adult Education, May 1981*. (National Center for Education Statistics Early Release).

* Adult education includes all courses and other organized educational activities, taken by persons 16 years of age and over other than courses taken as a full-time student in a program leading toward a high school diploma or a college degree or as a full-time student in a vocational or occupational program.

Figure 11. — Participation in adult education, by age group, income level, and subject area: United States, May 1981

*Includes agriculture and renewable natural resources; arts, visual and performing; home economics; personal occupations; language, linguistics, and literature; life sciences, physical sciences, and mathematical sciences; physical education and leisure; social studies and social sciences; interdisciplinary studies; and unclassified areas.

CHAPTER V

FEDERAL PROGRAMS FOR EDUCATION AND RELATED ACTIVITIES

Grants of public lands for maintenance of the public schools were authorized by the Congress of the Confederation in 1785. Then, in 1787, Federal land was granted for education under the Northwest Ordinance when the United States Government entered into a contract to sell a large tract of land in Ohio, with a section of each township involved in the sale reserved for schools. Additional land was reserved for a university. From this modest beginning there has emerged the current complex pattern of Federal educational support.

Federal support for education is not definable as a single unified national plan. Rather, the national effort is a collection of individual programs and procedures, each individually enacted into law to support or accomplish a specific purpose. Each program reflects a perceived national problem or need and establishes a method to mitigate or eliminate the problem. Consequently, it is not surprising that Federal educational assistance programs or activities show great variety.

This chapter provides a summary of the Federal funds for these programs to help describe the magnitude of the Federal fiscal effort and give some indication of the scope and variety of the programs.

A capsule view of the history of Federal educational activities is provided in the following list of selected legislation:

Year

- 1787 *Northwest Ordinance*—authorized land grants for the establishment of educational institutions.
- 1802 *An act* fixing the military peace establishment of the United States—established the U.S. Military Academy. (The U.S. Naval Academy was established in 1845 by the Secretary of the Navy.)
- 1862 *First Morrill Act*—authorized public land grants to the States for the establishment and maintenance of agricultural and mechanical colleges.

1867 *Department of Education Act*—authorized the establishment of the Department of Education.*

1876 *Appropriation Act*, Department of the Treasury—established the U.S. Coast Guard Academy.

1890 *Second Morrill Act*—provided for money grants for support of instruction in the agricultural and mechanical colleges.

1911 *The State Marine School Act*—authorized Federal funds to be used for the benefit of any nautical school in any of 11 specified State seaport cities.

1917 *Smith-Hughes Act*—provided for grants to States for support of vocational education.

1918 *Vocational Rehabilitation Act*—Provided for grants for rehabilitation through training of World War I veterans.

1919 *An act* to provide for further educational facilities—authorized the sale by the Federal Government of surplus machine tools to educational institutions at 15 percent of acquisition cost.

1920 *Smith-Bankhead Act*—authorized grants to States for vocational rehabilitation programs.

1935 *Bankhead-Jones Act* (P.L. 74-182)—authorized grants to States for agricultural experiment stations.

Agricultural Adjustment Act (P.L. 74-320)—authorized 30 percent of the annual customs receipts to be used to encourage the exportation and domestic consumption of agricultural commodities. Commodities purchased under this authorization

*The Department of Education as established in 1867 was later to be known as the Office of Education until 1979, when, under P.L. 96-88, it was again designated as a "department." Therefore, for purposes of consistency, it is referred to as the "Department of Education" even in those tables covering years when it was officially the "Office of Education."

- began to be used in school lunch programs in 1936. The *National School Lunch Act* of 1946 continued and expanded this assistance.
- 1936 *An act* to further the development and maintenance of an adequate and well balanced American Merchant Marine (P.L. 84-415)—established the U.S. Merchant Marine Academy.
- 1937 *National Cancer Institute Act*—established the Public Health Service fellowship program. Subsequently, other fellowships were authorized in legislation concerning other agencies.
- 1941 *Amendment to Lanham Act* of 1940—authorized Federal aid for construction, maintenance, and operation of schools in federally impacted areas. Such assistance was continued under P.L. 815 and P.L. 874, 81st Congress, in 1950.
- 1943 *Vocational Rehabilitation Act* (P.L. 78-16)—provided assistance to disabled veterans.
School Lunch Indemnity Plan (P.L. 78-129)—provided funds for local lunch food purchases.
- 1944 *Servicemen's Readjustment Act* (P.L. 78-346)—provided assistance for education of veterans.
Surplus Property Act (P.L. 78-457)—authorized transfer of surplus property to educational institutions.
- 1946 *National School Lunch Act* (P.L. 79-396)—authorized assistance through grants-in-aid and other means to States to assist in providing adequate foods and facilities for the establishment, maintenance, operation, and expansion of nonprofit school lunch programs.
George-Barden Act (P.L. 79-586)—expanded Federal support of vocational education.
- 1948 *United States Information and Educational Exchange Act* (P.L. 80-402)—provided for the interchange of persons, knowledge, and skills between the United States and other countries.
- 1949 *Federal Property and Administrative Services Act* (P.L. 81-152)—provided for donation of surplus property to educational institutions and for other public uses.
- 1950 *Financial assistance for local educational agencies affected by Federal activities* (P.L. 81-815 and P.L. 81-874)—provided assistance for construction (P.L. 815) and operation (P.L. 874) of schools in federally affected areas.
Housing Act (P.L. 81-475)—authorized loans for construction of college housing facilities.
- 1954 *An act* for the establishment of a United States Air Force Academy and other purposes (P.L. 83-325)—established the U.S. Air Force Academy.
Cooperative Research Act (P.L. 83-531)—authorized cooperative arrangements with universities, colleges, and State educational agencies for educational research.
National Advisory Committee on Education Act (P.L. 83-532)—established a National Advisory Committee on Education to recommend to the Secretary of Health, Education, and Welfare needed studies of national concern in the field of education and to propose appropriate action indicated by such studies.
School Milk Program Act (P.L. 83-690)—provided funds for purchase of milk for school lunch programs.
- 1956 *Library Services Act* (P.L. 84-597)—authorized grants to States for extension and improvement of rural public library services.
- 1957 *Practical Nurse Training Act* (P.L. 84-911)—provided grants to States for practical nurse training.
- 1958 *National Defense Education Act* (P.L. 85-865)—provided assistance to State and local school systems for strengthening instruction in science, mathematics, modern foreign languages, and other critical subjects; improvement of State statistical services; guidance, counseling, and testing services and training institutes; higher education student loans and fellowships; foreign language institutes and advanced foreign language study and training provided by colleges and universi-

ties; experimentation and dissemination of information on more effective utilization of television, motion pictures, and related media for educational purposes; and vocational education for technical occupations necessary to the national defense.

Education of Mentally Retarded Children Act (P.L. 85-926)—authorized Federal assistance for training teachers of the handicapped.

Captioned Films for the Deaf Act (P.L. 85-905)—authorized a loan service of captioned films for the deaf.

1961 *Area Redevelopment Act* (P.L. 87-27)—included provisions for training or retraining of persons in redevelopment areas.

1962 *Manpower Development and Training Act* (P.L. 87-415)—provided training in new and improved skills for the unemployed and underemployed.

Communications Act of 1934, Amendment (P.L. 87-447)—provided grants for the construction of educational television broadcasting facilities.

Migration and Refugee Assistance Act of 1962 (P.L. 87-510)—authorized loans, advances, and grants for education and training of refugees.

1963 *Health Professions Educational Assistance Act* (P.L. 88-129)—provided funds to expand teaching facilities and for loans to students in the health professions.

Vocational Education Act of 1963 (P.L. 88-210)—increased Federal support of vocational education schools, vocational work-study programs and research, training, and demonstrations in vocational education.

Higher Education Facilities Act of 1963 (P.L. 88-204)—authorized grants and loans for classrooms, libraries, and laboratories in public community colleges and technical institutes as well as undergraduate and graduate facilities in other institutions of higher education.

1964 *Civil Rights Act of 1964* (P.L. 88-352)—authorized the Commissioner

to (1) arrange, through grants or contracts with institutions of higher education, for the operation of short-term or regular session institutes for special training to improve ability of elementary and secondary school instructional staff to deal effectively with special education problems occasioned by desegregation; (2) make grants to school boards to pay, in whole or in part, the cost of providing inservice training in dealing with problems incident to desegregation; and (3) provide school boards technical assistance in desegregation and required nondiscrimination in federally assisted programs.

Economic Opportunity Act of 1964 (P.L. 88-452)—authorized grants for college work-study programs for students from low-income families; established a Job Corps program and authorized support for work-training programs to provide education and vocational training and work experience for unemployed youths; provided training and work experience opportunities in welfare programs; authorized support of education and training activities and of community action programs, including Head Start, Follow Through, and Upward Bound; and authorized the establishment of Volunteers in Service to America (VISTA).

1965 *Elementary and Secondary Education Act* (P.L. 89-10)—authorized grants for elementary and secondary school programs for children of low-income families; school library resources, textbooks, and other instructional materials for school children; supplementary educational centers and services; strengthening State education agencies; and educational research and research training.

Health Professions Educational Assistance Amendments (P.L. 89-290)—authorized scholarships to aid needy students in the health professions and grants to improve the quality of teaching in schools of

medicine, dentistry, osteopathy, optometry, and podiatry.

Higher Education Act of 1965 (P.L. 89-329)—provided grants for university community service programs, college library assistance, library training and research, strengthening developing institutions; teacher training programs; and undergraduate instructional equipment. Authorized insured student loans, established a National Teacher Corps, and provided for graduate teacher training fellowships.

Medical Library Assistance Act (P.L. 89-291)—provided assistance for construction and improvement of health sciences libraries.

National Foundation on the Arts and the Humanities Act (P.L. 89-209)—authorized grants and loans for projects in the creative and performing arts, and for research, training, and scholarly publications in the humanities.

National Technical Institute for the Deaf Act (P.L. 89-36)—provided for the establishment, construction, equipping, and operation of a residential school for postsecondary education and technical training of the deaf.

National Vocational Student Loan Insurance Act (P.L. 89-287)—encouraged State and nonprofit private institutions and organizations to establish adequate loan insurance programs to assist students to attend postsecondary business, trade, technical, and other vocational schools.

Disaster Relief Act (P.L. 89-313)—provided for assistance to local education agencies to help meet exceptional costs resulting from a major disaster.

1966 International Education Act (P.L. 89-698)—provided grants to institutions of higher education for the establishment, strengthening, and operation of centers for research and training in international studies and the international aspects of other fields of study.

National Sea Grant College and Program Act (P.L. 89-688)—authorized the establishment and operation of sea grant colleges and programs by initiating and supporting programs of education and research in the various fields relating to the development of marine resources.

Adult Education Act (P.L. 89-750)—authorized grants to States for the encouragement and expansion of educational programs for adults, including training of teachers of adults and demonstrations in adult education (previously part of the Economic Opportunity Act of 1964).

Model Secondary School for the Deaf Act (P.L. 89-694)—authorized the establishment and operation, by Gallaudet College, of a model secondary school for the deaf to serve the National Capital region.

Elementary and Secondary Education Amendments of 1966 (P.L. 89-750)—In addition to modifying existing programs, authorized grants to assist States in the initiation, expansion, and improvement of programs and projects for the education of handicapped children at the preschool, elementary and secondary school levels.

1967 Education Professions Development Act (P.L. 90-35)—amended the Higher Education Act of 1965 for the purpose of improving the quality of teaching and to help meet critical shortages of adequately trained educational personnel.

Public Broadcasting Act of 1967 (P.L. 90-129)—established a Corporation for Public Broadcasting to: Assume major responsibility in channeling Federal funds to noncommercial radio and television stations, program production groups, and ETV networks directly or through contract; conduct research, demonstration, or training in matters related to noncommercial broadcasting; and award grants for construction of educational radio as well as television facilities.

1968 Elementary and Secondary Education Amendments of 1967 (P.L. 90-

247)—in addition to modifying existing programs, authorized support of regional centers for education of handicapped children, model centers and services for deaf-blind children, recruitment of personnel and dissemination of information on education of the handicapped; technical assistance in education to rural areas; support of dropout prevention projects; and support of bilingual education programs.

Handicapped Children's Early Education Assistance Act (P.L. 90-538)—authorized preschool and early education programs for handicapped children.

Vocational Education Amendments of 1968 (P.L. 90-576)—changed the basic formula for allocating funds; provided for a National Advisory Council on Vocational Education, expansion of vocational education services to meet the needs of the disadvantaged, collection and dissemination of information for programs administered by the Commissioner of Education, and preparation of a catalog of all Federal education assistance programs.

Higher Education Amendments of 1968 (P.L. 90-575)—authorized new programs to assist disadvantaged college students through special counseling and summer tutorial programs, and programs to assist colleges to combine resources for cooperative uses, including closed-circuit television and computer networks. Also authorized grants to expand and strengthen student cooperative programs and to expand programs which provide clinical experiences to law students.

1970 *Elementary and Secondary Education Assistance Programs, Extension* (P.L. 91-230)—authorized comprehensive planning and evaluation grants to State and local education agencies; provided for the establishment of a National Commission on School Finance.

National Commission on Libraries and Information Science Act (P.L. 91-345)—established a National Commission on Libraries and Informa-

tion Science to effectively utilize the Nation's educational resources and to cooperate with State and local governments and public and private agencies in assuring optimum provision of services.

Office of Education Appropriation Act (P.L. 91-380)—provided emergency school assistance to desegregating local education agencies.

Environmental Education Act (P.L. 91-516)—established an Office of Environmental Education to: Develop curriculum and initiate and maintain environmental education programs at the elementary-secondary levels; disseminate information; provide training programs for teachers and other educational, public, community, labor, and industrial leaders and employees; provide community education programs; and distribute material dealing with environment and ecology.

Drug Abuse Education Act of 1970 (P.L. 91-527)—provided for: Development, demonstration, and evaluation of curriculums on the problems of drug abuse; dissemination of information; support of training programs for teachers, counselors, law-enforcement officers, and other public leaders and officials; and support of community education programs for parents and others on drug abuse problems.

1971 *Comprehensive Health Manpower Training Act of 1971* (P.L. 92-257)—amended title VII of the Public Health Service Act, increasing and expanding provisions for health manpower training and training facilities.

Nurse Training Act of 1971 (P.L. 92-158)—amended title VIII, Nurse Training, of the Public Health Service Act, increasing and expanding provisions for nurse training facilities.

1972 *Drug Abuse Office and Treatment Act of 1972* (P.L. 92-255)—established a Special Action Office for Drug Abuse Prevention to provide overall planning and policy for all Federal drug-abuse prevention functions; a

National Advisory Council for Drug Abuse Prevention; community assistance grants for community mental health centers for treatment and rehabilitation of persons with drug-abuse problems, and, in December 1974, a National Institute of Drug Abuse.

Education Amendments of 1972 (P.L. 92-318)—established the Education Division and the National Institute of Education; general aid for institutions of higher education; Federal matching grants for State student incentive grants; a National Commission on Financing Postsecondary Education; State Advisory Councils on Community Colleges; a Bureau of Occupational and Adult Education and State grants for the design, establishment, and conduct of postsecondary occupational education; and a bureau-level Office of Indian Education. Amended current Office of Education programs to increase their effectiveness and better meet special needs. Prohibited sex bias in admission to vocational, professional, and graduate schools, and public institutions of undergraduate higher education.

1973 *Older Americans Comprehensive Services Amendment of 1973* (P.L. 93-29)—made available to older citizens comprehensive programs of health, education, and social services.

Comprehensive Employment and Training Act of 1973 (P.L. 93-203)—provided for opportunities for employment and training to unemployed and underemployed persons. Extended and expanded provisions in the *Manpower Development and Training Act of 1962*, Title I of the *Economic Opportunity Act of 1962*, Title I of the *Economic Opportunity Act of 1964*, and the *Emergency Employment Act of 1971* as in effect prior to June 30, 1973.

1974 *Educational Amendments of 1974* (P.L. 93-380)—provided for the consolidation of certain programs; established a National Center for Edu-

cation Statistics in the Office of the Assistant Secretary for Education and transferred to the Center, from the Office of Education, the responsibility for the collection and diffusion of education statistics; specified that the Office of Education shall be the primary Federal agency responsible for the administration of programs of financial assistance to educational agencies, institutions, and organizations; authorized a White House Conference on Education, and mandated several education surveys and studies.

Juvenile Justice and Delinquency Prevention Act of 1974 (P.L. 93-415)—provided for technical assistance, staff training, centralized research, and resources to develop and implement programs to keep students in elementary and secondary schools and prevent unwarranted and arbitrary suspensions and expulsions; established, in the Department of Justice, a National Institute for Juvenile Justice and Delinquency Prevention.

White House Conference on Library and Information Services Act (P.L. 93-568)—authorized and requested the President to call a White House conference on library and information services not later than 1978.

1975 *Indian Self-Determination and Education Assistance Act* (P.L. 93-638)—provided for increased participation of Indians in the establishment and conduct of their education programs and services.

Harry S. Truman Memorial Scholarship Act (P.L. 93-642)—established the Harry S. Truman Scholarship Foundation and created a perpetual education scholarship fund for young Americans to prepare and pursue careers in public service.

Indochina Migration and Refugee Assistance Act of 1975 (P.L. 94-23)—authorized funds to be used for education and training of aliens who have fled from Cambodia or Vietnam.

1976 *Educational Broadcasting Facilities and Telecommunications Demon-*

stration Act of 1976 (P.L. 94-309)—established a telecommunications demonstration program to promote the development of non-broadcast telecommunications facilities and services for the transmission, distribution, and delivery of health, education, and public or social service information.

Education Amendments of 1976 (P.L. 94-482)—extended and revised Federal programs for education assistance for higher education, vocational education, and a variety of other programs. Provided for payments to institutions of higher education for administration expenses for Federal student assistance, establishment of higher education centers and services for education information to assist students and teachers, collection of vocational and occupational education data, control and coordination of data collection activities between the Office of Education and the Office for Civil Rights, and a report to the Congress (due June 30, 1977) containing analyses and recommendations for a reorganization of the Education Division.

1977 *Youth Employment and Demonstration Projects Act of 1977* (P.L. 95-93)—established a youth employment training program that includes, among other activities, promoting education-to-work transition, literacy training and bilingual training, attainment of certificates of high school equivalency, job sampling including vocational exploration in the public and private sector, and institutional and on-the-job training including development of basic skills and job skills.

1978 *Career Education Incentive Act* (P.L. 95-207)—authorized the establishment of a career education program for elementary and secondary schools.

Tribally Controlled Community College Assistance Act (P.L. 95-471)—provided Federal funds for the operation and improvement of tribally

controlled community colleges for Indian students.

Education Amendments of 1978 (P.L. 95-561)—established a comprehensive basic skills program aimed at improving pupil achievement in reading, mathematics, and written and oral communication (replaced the existing National Reading Improvement program); established a community schools program to provide for the use of public buildings, including schools, as a community center operated by a local education agency in conjunction with other agencies and organizations in the community; authorized a broad program of study with regard to school finance reform and equalization.

Middle Income Student Assistance Act (P.L. 95-566)—modified the provisions for student financial assistance programs to allow middle income as well as low income students attending college or other postsecondary institutions to qualify for Federal education assistance.

1979 *Department of Education Organization Act* (P.L. 96-88)—established a Department of Education. Provided for the transfer into the new Education Department of functions of the Education Division of the Department of Health, Education, and Welfare along with other selected programs for education administered within H.E.W. and functions of other selected programs for education in the Department of Defense, Department of Housing and Urban Development, Department of Justice, Department of Labor, and the National Science Foundation.

1980 *Asbestos School Hazard Protection and Control Act of 1980* (P.L. 96-270)—established a program for inspection of schools for detection of hazardous asbestos materials and provided loans to assist educational agencies to contain or remove and replace such materials.

Amendments to the Higher Education Act of 1965 (P.L. 96-374)—provided for a new "Commission on Na-

tional Development in Postsecondary Education" and a new "Urban Grant University Program."

1981 *Education Consolidation and Improvement Act of 1981* (P.L. 97-35)—consolidated 42 programs into 7 programs to be funded under the elementary and secondary block grant authority.

1983 *Student Loan Consolidation and Technical Amendments Act of 1983* (P.L. 98-79)—established 8 percent rate for Guaranteed Student Loans and extended Family Contribution Schedule.

Challenge Grant Amendments of 1983 (P.L. 98-95)—amended Title III, *Higher Education Act* and added authorization of Challenge Grant program. The Challenge Grant program provides funds to eligible institutions on a matching basis as incentive to seek alternative sources of funding.

Education of Handicapped Act Amendments (P.L. 98-199)—added Architectural Barrier amendment and clarified participation of Handicapped Children in private schools.

Education Consolidation and Improvement Act of 1981 Amendments (P.L. 98-211)—added technical amendments for Chapter 1, and provided for parental involvement and minor changes in other programs.

1984 *Rehabilitation Amendments of 1984* (P.L. 98-221)—revised and extended the Rehabilitation Act of 1973. Provides for the Helen Keller National Center for Deaf-Blind.

Education for Economic Security Act (P.L. 98-377)—added new science and mathematics programs for elementary, secondary and postsecondary education. The new programs include: magnet schools, excellence in education, and equal access.

Higher Education Act of 1965 Amendments (P.L. 98-312)—This act amended Title III of the Higher Education Act of 1965 by creating a new method of funding the Challenge Grant program. The act also increased the level of authorization for the Office of the Inspector General and extended the Allen J. Ellender Fellowship program through fiscal year 1989.

Carl D. Perkins Vocational Education Act (P.L. 98-524)—This act continues Federal assistance for vocational education through fiscal year 1989. The act will replace the *Vocational Education Act of 1963*. It provides aid to the States to make vocational education programs accessible to all persons, including handicapped and disadvantaged, single parents and homemakers, and the incarcerated. All programs must be designed to eliminate sex stereotyping.

Human Services Reauthorization Act (P.L. 98-558)—This act reauthorized the Head Start and Follow Through programs through fiscal year 1986. It also created a Carl D. Perkins scholarship program, a National Talented Teachers Fellowship Program, a Federal Merit Scholarships program, and a Leadership in Educational Administration program.

¹ Estimated.

² Included above in "Special programs."

³ Included above in Department of Education, "Impact aid program."

⁴ Programs were funded through fiscal year 1982 under the Comprehensive Employment and Training Act.

⁵ Negative amounts occur when program receipts exceed outlays.

⁶ Included in total above.

⁷ Obligation amounts are reported.

⁸ Total obligations incurred by the National Institute of Education and the National Center for Education Statistics, including all research conducted by institutions and individuals.

--- Indicates data either not reported, not available, or not applicable.

NOTE.—To the extent possible, amounts reported represent outlays rather than obligations.

¹ Chapter 1, Education Consolidation and Improvement Act of 1981.

² Included in Chapter 2, Education Consolidation and Improvement Act of 1981.

³ Maintenance and operations.

⁴ Includes State grants and preschool incentive grants to States.

⁵ Includes institutional aid to strengthen higher education institutions serving significant numbers of low-income students, other special programs for the disadvantaged, Cooperative Education, Fund for the Improvement of Postsecondary Education, fellowships, and annual interest subsidy grants for facilities construction.

⁶ Includes Basic Educational Opportunity Grants (Pell Grants), Work Study Program, Supplemental Opportunity Grants, and State Student Incentive Grants.

⁷ Federal capital contribution for long-term low interest loans to financially needy students. Excludes interest subsidies and other costs of the Guaranteed Student Loan Program.

NOTE.—To the extent possible, data represent outlays rather than obligations. Because of rounding, details may not add to totals.

SOURCE: U.S. Department of Education, National Center for Education Statistics, special tabulation from budget and program data.

¹ Dollars reflect actual obligations during the fiscal year regardless of when the funds were actually spent by a recipient institution. Data include obligations to federally funded research and development centers administered by colleges and universities.

² Includes Department of Commerce, Department of Housing and Urban Development, Department of the Interior, Agency for International Development, Department of Labor, Department of Transportation, and Nuclear Regulatory Commission.

--- Indicates data either not reported, not available, or not applicable.

NOTE.—Totals exclude loans to individuals such as the Federal Guaranteed Student Loan program sponsored by the Department of Education, and Federal training and development activities, as well as funds allocated to State agencies, even though the final recipient of such funds is known to be an academic institution. Tuition support programs such as Pell Grants are included in these figures.

SOURCE: National Science Foundation, Federal Support to Universities, Colleges, and Selected Nonprofit Institutions, Fiscal Year 1982; and unpublished tabulations for fiscal year 1983.

Federal education funds	34,631.3	36,521.5	34,690.3	34,759.0	36,495.5	38,555.2
Non-Federal funds generated by Federal programs	5,419.4	8,253.9	6,814.1	7,624.7	8,678.1	9,072.6
Guaranteed student loans ²	4,840.0	7,824.0	6,238.0	6,928.0	7,926.0	7,941.0
Direct loans ³	392.7	279.4	401.8	536.2	582.3	841.0
State student incentive grants ⁴	76.5	76.5	72.0	60.0	76.0	152.0
Work-study programs ⁵	110.2	74.0	102.3	100.5	93.8	138.6
Estimated Federal tax expenditures for education ⁶	13,000.0	16,200.0	16,000.0	16,600.0	18,100.0	---

¹ Estimated.

² New student loans guaranteed by the Federal Government.

³ Student loans created with revolving funds derived from repayments of outstanding loans.

⁴ State matching grants.

⁵ Estimated employer contributions to student earnings (amount of aid for students less appropriations).

⁶ Tax expenditures are the difference between current Federal tax receipts and what these receipts would be without existing deductions to income allowed by Federal tax provisions.

--- Indicates data either not available, not reported, or not applicable.

NOTE.—To the extent possible, Federal education funds data represent outlays rather than obligations. Because of rounding, details may not add to totals.

SOURCES: U.S. Department of Education, National Center for Education Statistics, compiled from data appearing in U.S. Office of Management and Budget, *Budget of the U.S. Government, Appendix*, fiscal years 1982 to 1985; National Science Foundation, *Federal Funds for Research and Development*, fiscal years 1983 to 1985; and unpublished data.

Chapter VI

Special Studies and Statistics Related to American Education

This chapter consists of a varied collection of statistics that relate education to the world of work and to other facets of society. The data are arranged in three major categories: (1) The employment status, occupation, and income of school dropouts and of persons completing varying levels of education; (2) international education; and (3) learning resources and technology.

Included in the first group of tables are data from the Bureau of Labor Statistics on the years of school completed by persons in various occupational groups. The Bureau of Labor Statistics is also the source for several of the tabulations concerning the employment of recent high school graduates and school dropouts. The summary data on the employment of recent college graduates are derived from a survey by the Center for Statistics. The College Placement Council has provided information on salaries offered candidates for bachelor's, master's, and doctor's degrees. The Bureau of the Census is the source for data on annual income by years of school completed.

The section about international education contains data from the Institute of Interna-

tional Education concerning American college students abroad and statistics on foreign students enrolled in American institutions of higher education. Tables from the United Nations Educational, Scientific, and Cultural Organization (UNESCO) contain data on population, school enrollment, teachers, and expenditures for major areas of the world. Data comparing mathematics test scores for various nations were supplied by the International Association for Evaluation of Educational Achievement and by the National Institute of Educational Research, Ministry of Education, Japan. The Bureau of the Census is the source for a table that provides comparative statistics on literacy rates in a number of different countries.

The third group of tables contains Center for Statistics data on public libraries, public school libraries, and college and university libraries. The Corporation for Public Broadcasting is the source for the data on public television instructional programming. The statistics concerning the use of microcomputers in elementary and secondary schools were derived from surveys provided by Market Data Retrieval, Inc.

Foreign Students Enrolled in American Colleges and Universities

Nearly 339,000 foreign students were enrolled in institutions of higher education in the United States and its territories during the academic year 1983-84. This represents a small gain over the 337,000 students enrolled in 1982-83 and is the largest number of students from abroad ever enrolled in this country in a single year.

Foreign students have been attracted to the United States in ever-increasing numbers in recent years. The 1983-84 figure is 2.7 times as large as the 125,000 foreign students enrolled only 10 years earlier. Many educators view the increased interest in international education as a hopeful development, one which may lead to greater understanding among the nations and peoples of the world.

The foreign students in 1983-84 were a diverse group, coming from nearly every country in the world. As the accompanying chart indicates, more students came from South and East Asia, the Middle East, and Latin American than from any other area.

Nine countries—Taiwan, Iran, Nigeria, Malaysia, Canada, the Republic of Korea, India, Venezuela, and Japan—each sent more than 13,000 persons to study here. These countries together accounted for 44 percent of all the foreign students in the United States. Taiwan, with nearly 22,000 students, replaced Iran as the country with the most students enrolled here.

The students from abroad pursued a wide variety of programs in 1983-84. The most popular fields, in descending order, were engineering, business and management, mathematics and computer science, physical and life sciences, and social sciences. Eighty-seven percent of the students were enrolled in 4-year colleges and universities, and 35 percent were graduate students. More than 29 percent of the foreign visitors were women.

These data are from the Institute of International Education, 809 United Nations Plaza, New York, NY 10017. More detailed information appears in the Institute's report, *Open Doors, 1983-84*.

Figure 12.—Foreign students enrolled in American institutions of higher education: 1983-84

*In addition, a small number of students (0.1 percent of the total) were classified as "stateless."

NOTE.—Because of rounding, percentages may not add to 100.0.

¹ Education at the first level provides basic instruction in the tools of learning (elementary and primary school).

² Education at the second level is based upon at least 4 years' previous instruction at the first level, and provides general or specialized instruction, or both (middle, secondary, vocational, teacher-training, and high school).

³ Education at the third level requires as a minimum condition of admission the successful completion of education at the second level, or evidence of the attainment of an equivalent level of knowledge (university, teachers' college, higher professional school).

Guide to Sources

Source and Reliability of Estimates

The information presented in this report was obtained from many sources, including Federal and State agencies, private research organizations, and professional associations. The data were collected using several research methods, including surveys of a universe (such as all colleges) or of a sample, compilations of administrative records, and statistical projections. A description of the information source and methods of data collection used for each data set is presented by sponsoring organization in the following subsections, preceded by a general discussion of data accuracy.

Accuracy of Data

The accuracy of any data is determined by the joint effects of sampling and nonsampling errors. Estimates based on a sample will differ somewhat from the figures that would have been obtained if a complete census had been taken using the same survey instruments, instructions, and procedures. The resulting differences are called sampling errors or sampling variability. In addition, all surveys, both universe and sample, are subject to design, reporting, and processing errors, and errors due to nonresponse. To the extent possible, these nonsampling errors are kept to a minimum by methods built into the survey procedures. In general, however, the effects of nonsampling errors are more difficult to gauge than those produced by sampling variability.

The standard error is the primary measure of sampling variability. The chances are about 68 out of 100 that an estimate from the sample would differ from a complete census by less than the standard error. The chances are about 90 out of 100 that the difference would be less than 1.65 times the standard error; about 95 out of 100 that the difference would be less than 1.96 times the standard error; and about 99 out of 100 that it would be less than 2.5 times as large. Thus, the standard error provides a specific

range with a stated confidence within which a given estimate would lie if a complete census had been conducted.

To illustrate this further, consider the table of standard errors and 90 percent confidence intervals for estimates from the High School and Beyond (HS&B) sample (A1, below). For an estimate of 30 percent of males participating in a program, the table shows that the standard error is 0.6 percent. This means that the chances are about 68 out of 100 that the 30 percent estimate is within 0.6 percent of the percent that could result from a complete census. Therefore, the 68 percent confidence interval is 29.4 to 30.6. In order to increase our confidence to 90 percent, we would have to use 1.65 times the standard error or 0.99 percent. Therefore, the 90 percent confidence interval (rounded to tenths of a percent) would then be 29.0 to 31.0, which is the interval shown in the table.

A similar statement can be made concerning an estimated difference. The standard error of a difference between two sample estimates is approximately equal to the square root of the sum of the squared standard errors of the estimates. The standard error of a difference, $a-b$, is:

$$s.e._{a-b} = \sqrt{s.e._a^2 + s.e._b^2 - 2 s.e._{ab}}$$

It should be noted that the standard errors presented in subsequent sections and in the original documents are approximations. That is, to derive estimates of standard errors that would be applicable to a wide variety of items and could be prepared at a moderate cost, a number of approximations were required. As a result, the standard errors presented provide a general order of magnitude rather than the exact standard error for any specific item.

The preceding discussion on sampling variability was directed toward a situation concerning one or two estimates. A more difficult situation is encountered when determin-

ing the accuracy of statistical projections. In general, the further away from the actual data being used for the projections, the greater the possible error in the projection. That is, if annual data from 1970 to 1983 are being used to project enrollment in institutions of higher education, the further away from 1983 one gets, the more variability in the projection. One is less sure of the 1990 projection of enrollment in institutions of higher education than the 1985 projection. A detailed discussion of the projections methodology is contained in *Projections of Education Statistics to 1992-93*, 1985.

Many of the surveys conducted by the Center for Statistics (CS) are universe surveys of all known institutions. These types of surveys are not subject to sampling error, but may suffer from a number of other types of problems. Typically, there are problems in identifying the institutions to be included in the survey universe. Some institutions included in the surveys may be misclassified. Institutions that should be in the survey may not be identified for the survey collection.

Other difficulties arise from interpretation of survey items. The Center attempts to minimize these errors through publication of supplementary materials for answering questionnaires and through adherence to standard definitions. Nevertheless, some errors persist. Nonsampling errors also include mistakes made by respondents or in the survey processing procedure. In many cases, data submitted to CS has already been aggregated (i.e., by State respondents, prior to submission to CS). The Center is dependent on the integrity of these primary data systems for information. In some cases, respondents are not able to report. For universe surveys, CS makes estimates for these nonrespondents based on appropriate parameters. Typically, these estimates are based on the prior year's response and peer respondents. Although the magnitude of nonsampling errors is unknown, a number of idiosyncrasies have been identified. To the extent possible, these situations are noted on the appropriate tables.

Sources of Information

A large number and variety of sources were used as the basis of information for this report. Particular care should be taken in comparing data from the different sources.

Differences in procedures, timing, phrasing of questions, interviewer training, and so forth, mean that the results from the several sources are not strictly comparable. The information in this report comes from the following different sources identified by the sponsoring agency or organization. Government sources are presented first, followed by private research and professional associations. It should be noted that more extensive documentation of survey procedures does not imply more problems with the data, only that more information is available on certain surveys than on others.

Part 1.—Federal Agencies

Center for Statistics

Common Core of Data

The Common Core of Data (CCD) survey is a coordinated effort administered by the Center for Statistics (CS) to acquire and maintain statistical data on the fifty States, the District of Columbia, and the outlying areas. The CCD survey is a universe survey of State education agencies and the education agencies of the District of Columbia and outlying areas. Information about staff and students is collected annually at the school, LEA, and State Levels. Information about revenues and expenditures is also collected at the LEA and State Levels.

Since the CCD is a universe survey, the information presented in this report from the CCD is not subject to sampling error. However, nonsampling error could occur from two possible sources—nonreturn and misreporting. In the case of CCD, nonreturn is minimal, with education agencies submitting almost all of the six survey instruments each year.

Understandably, with the submission of data for over 85,000 public schools and approximately 15,800 local school districts compiled by 57 education agencies, misreporting can occur. The Center attempts to minimize these errors by working closely with the Council of Chief State School Officers (CCSSO) and its Committee on Evaluation and Information Systems (CEIS).

Upon receipt of the data from the education agencies, CS subjects it to a comprehensive edit procedure. In cases where data are

determined to be inconsistent, missing, or out-of-range, the education agencies are contacted for verification. When necessary, revisions are made.

As in any questionnaire survey, interpretation of instructions and definitions may vary among respondents. Because elementary/secondary education is a State and local responsibility, any statistical total for the Nation as a whole reflects a composite of the different reporting practices in the States and areas. The use of standard forms and definitions tends to minimize these variations. Whenever State deviations from prescribed definitions and instructions are known, they are indicated in the footnotes. The State education agencies report data to CS from data collected and edited in their regular reporting cycles for which CS reimburses them. The Center encourages the agencies to incorporate CS items they do not already collect into their own survey systems, where they will also be available for the subsequent CCD survey. Over a period of time, this has meant fewer missing cells in each State's response and therefore less need to impute data.

1983-84 Private School Survey

The 1983 Private School Survey was conducted by Westat for the Center for Statistics. The survey was carried out in two parts, one based on a "list" frame, and one based on an "area" frame. The area frame was used under the assumption that the lists available to CS were not entirely comprehensive, and that list building techniques applied to a sample of Census areas would reveal some additional private schools.

The Center started with the most complete list available (which was comprised of some 21,000 schools) and conducted an update effort in 1983, based on a review of new directories and other published sources. This effort resulted in a list of just under 27,000

schools. This frame was then stratified into 12 strata based on various combinations of religious affiliation and school level. A systematic sample of 1,320 schools was selected with probabilities equal to the square root of the enrollment of the school divided by the sum of the square roots of enrollment for all of the schools in the stratum. Inflating this sample provided an estimation universe, which was subsequently reduced by removing the estimated numbers of duplicates, non-respondents, coding errors, and ineligible. The final estimated list universe of schools was 21,710. After follow-up procedures, the final response rate for the information presented here was 93 percent with little variation by affiliation category.

For the area sample, the basic frame was a list of all counties reported from the 1980 Census, adjusted so that independent cities were treated as counties and smaller counties were combined with other contiguous counties. This produced a list of 2,497 sampling units. These sampling units were stratified according to the four Census regions, in or out of a Standard Metropolitan Statistical Area (SMSA), and above or below the median private school enrollment for that region and SMSA status, yielding 16 strata. The final sample was a systematic one comprised of 75 sampling units, 8 of which were drawn with certainty based upon populations exceeding 1.7 million in the 1980 Census. The remaining units were selected with probabilities proportionate to the square root of the population of the unit within the stratum.

For each of the sampling units in the area design, non-overlapping (with the list frame) schools were sought by reviewing directories of various types (e.g., local, private school organizations, telephone directories) and by telephone contacts with officials, churches, chambers of commerce, and selected vendors such as milk companies. These procedures produced 901 schools which met CS criteria for functioning, private schools. The survey and follow-up produced a response rate of 88 percent. When weighted, these data inflated to approximately 6,000 schools nationally. Since the area frame was designed to be non-overlapping with the list frame, results for the area sample were combined with those for the list sample.

Higher Education General Information Survey

The "Higher Education General Information Survey" (HEGIS) is a coordinated effort administered by the Center for Statistics (CS). Its purpose is to acquire and maintain statistical data on the characteristics and operations of institutions of higher education. HEGIS, developed in 1966, is an annual universe survey of institutions listed in the latest edition of *Education Directory, Colleges and Universities*.

The information presented in this report draws on HEGIS surveys which solicit information concerning institutional characteristics, faculty salaries, finances, enrollment, and degrees. These surveys are part of the overall HEGIS package and as such cover all institutions in the universe. The data presented, therefore, are not subject to sampling error but are subject to nonsampling error. Due to the differing information solicited by the various survey instruments, the sources of nonsampling errors differ. Each survey will therefore be discussed separately. A validation study ("HEGIS Post-Survey Validation Study"), was conducted in 1979 for two HEGIS surveys, enrollment and degrees. The information concerning the nonsampling error of these two surveys presented in this appendix draws extensively upon this study.

Institutional Characteristics of Colleges and Universities

The "Institutional Characteristics" survey provides the basis for the universe of institutions presented in the *Education Directory, Colleges and Universities*, and it is used in all other HEGIS data collection activities. The universe is comprised of institutions that offer at least a 1-year program of college-level studies leading toward a degree and that meet certain accreditation criteria. In the fall, institutions included in the *Directory* the previous year receive a computer printout of their information to update. Institutions not

previously included (and which have applied for Directory listing) are sent a questionnaire form. All institutions reported are certified as eligible to be listed by the Office of Postsecondary Education Division of Eligibility and Agency Evaluation within the U.S. Department of Education.

Opening Fall Enrollment in Colleges and Universities

"Opening Fall Enrollment in Institutions of Higher Education" has been part of the HEGIS series since its development. The enrollment survey, as with the HEGIS degree survey, does not appear to suffer significantly from problems associated with nonresponse. The major sources of nonsampling error for this survey come from classification problems, the unavailability of needed data, interpretation of definitions, the survey due date, and operational errors. Of these, the classification of students appears to be the main source of error. Institutions have problems in correctly classifying first-time freshmen, other first-time students, and unclassified students for both full-time and part-time categories. These problems occur most often at 2-year institutions (both private and public) and private 4-year institutions. In 1977-78, the classification problem led to an estimated overcount of 11,000 full-time students and an undercount of 19,000 part-time students. Although the percentage of error for the grand total was quite small (less than 1 percent), percentage of errors for detailed student levels might be as high as 5 percent (or even higher at certain student levels).

Salaries, Tenure, and Fringe Benefits of Full-Time Instructional Faculty

The "Salaries, Tenure, and Fringe Benefits of Full-Time Instructional Faculty" survey has been collected every year since 1966, except for 1973-74. Although the survey form has changed a number of times during these years, only comparable data are presented in the report. The data are collected from the colleges and universities in a summary fashion.

This survey differs from other HEGIS surveys in that imputations are not made for nonrespondents. Thus, there is some possibility that the salary averages presented in this report may differ from the results of a

complete enumeration of all colleges and universities. The response rate for the 1982-83 survey was 89.7 percent. The response rate for public colleges (97.9 percent) was substantially higher than the response rate for private colleges (82.9 percent). It is probable that the public colleges' salary data are more accurate than the data for private colleges. Other sources of nonsampling error include computational errors and misclassification in reporting and processing. The Center checked data reported by the individual colleges for internal and longitudinal consistency. The colleges were contacted by mail or telephone to check on inconsistent data.

Earned Degrees Conferred

The "Earned Degrees Conferred" survey has been part of the HEGIS series since its development. However, the degree classification taxonomy was revised in 1970-71 and 1982-83. The information from survey years 1970-71 through 1981-82 is directly comparable, but care must be taken if information before or after this date is included in any comparison. "Degrees Conferred" trend tables arranged by the 1982-83 classification have been added to the *Digest* to provide consistent data from 1970-71 to 1982-83. The nonreturn rate does not appear to be a significant source of nonsampling error for this survey. The return rate over the years has been extremely high, with the rate for years 1977-78 and 1978-79 at nearly 100 percent. Because of the high return rate, nonsampling error caused by imputation would also be minimal.

The major sources of nonsampling error for this survey are: differences in the HEGIS program taxonomy and taxonomies used by the colleges; classification of double majors and double degrees; operational problems; and timing of the survey. In the validation study conducted in 1979, it was found that the sources of nonsampling error noted above contributed to an error rate of 0.3 percent overreporting of bachelor's degrees and a 1.3 percent overreporting rate of master's degrees. The differences, however, varied greatly among fields. Over 50 percent of the fields selected for the study had no errors identified. The major categories of fields that had large differences were: business and management, education, engineering, letters and psychology. It is also shown that differ-

ences in proportion to the published figures were less than 1 percent for most of the selected fields that had some errors. Exceptions to these were: master's and Ph.D. programs in labor and industrial relations (20 percent and 8 percent); bachelor's and master's programs in art education (3 percent and 4 percent); bachelor's and Ph.D. programs in business, commerce, and in distributive education (5 percent and 9 percent); master's programs in philosophy (8 percent); and Ph.D. programs in psychology (11 percent).

Financial Statistics of Institutions of Higher Education

The "Financial Statistics of Institutions of Higher Education" survey has been part of the HEGIS series since its development. A number of changes were made in the financial survey instruments in 1975. While these changes were significant, only comparable information on trends is presented in this report. Other possible sources of nonsampling error in the financial statistics are nonresponse, imputation, and misclassification. The response rate has been over 90 percent for the years reported. Two general methods of imputation have been used: (1) if the prior year's data were available for a nonresponding institution, these data were inflated using the Higher Education Price Index and adjusted according to changes in enrollments; or (2) if no previous year's data were available, current data were used from peer institutions selected for location (State or region), control, level, and enrollment size of institution. For the most recent year reported, the imputation method did not include the adjustment for changes in enrollments. It should be noted that the imputed current funds expenditures of the nonrespondents are less than 3 percent of the aggregate U.S. total.

To reduce reporting error, CS uses national standards for reporting finance statistics. These standards are contained in *Colleges and University Business Administration: Administrative Services (1974 Edition)*, published by the National Association of College and University Business Officers; *Audits of Colleges and Universities* (as amended August 31, 1974), by the American Institute of Certified Public Accountants; and *HEGIS Financial Reporting Guide (1980)*, by CS.

Wherever possible, definitions and formats in the survey form are consistent with those in these three accounting texts.

Washington, D.C. 20208.

High School and Beyond

"High School and Beyond" (HS&B) is a national longitudinal survey of 1980 high school seniors and sophomores conducted by CS. A probability sample of 1,015 high schools were selected with a target number of 36 seniors and 36 sophomores in each of the schools. A total of 58,270 students participated in the base-year survey. Substitutions were made for noncooperating schools in those strata where it was possible, but not for students. Student and parent refusals and student absences resulted in an 84 percent completion rate for students. (This refers to the overall return rate of the survey and not the completion rate of each item within the survey.)

Several small groups in the population were oversampled to allow for special study of certain types of schools or students. Students completed questionnaires and took a battery of cognitive tests. In addition, a sample of parents of sophomores and seniors (about 3,600 for each cohort) was surveyed.

Nonresponse is calculated from the 9 percent rate of school nonresponse, the 16 percent rate of student nonresponse, and the nonresponse rates for particular survey items. For instance the nonresponse rates by item for those students returning a survey range from a low of 0.3 percent (for a question asking if the student expects to graduate) to a high of 21 percent (a question concerning family income). (Examples of the sampling variability in the estimates from the HS&B survey are given in table A1, below.)

The standard error (s.e.) of an individual percentage (p) can also be approximated by the formula

$$s.e.(p) = 1.6\sqrt{p(100-p)/n}$$

where n is the sample size and 1.6 is a factor used to adjust for the particular sample design used in High School and Beyond. In evaluating a difference between two percentages, the standard error of the difference may be conservatively approximated by taking the square root of the sum of the squared standard errors of the two percentages. For example, the estimated percentage of seniors of 1980 participating in athletic programs is 64 percent while the estimate for women in athletic programs is 41 percent, a difference of 23 percentage points. Using the formula and the sample sizes from table A2, the standard errors of the two percentages being compared are calculated to be:

$$11.6\sqrt{(64)(36)/12,907} = .676$$

$$11.6\sqrt{(41)(59)/14,086} = .663$$

The standard error of the difference is therefore

$$\sqrt{.676^2 + .663^2} = \sqrt{.457 + .440} = .95$$

The sampling error (95 chances in 100) of the difference is approximately double the standard error, or approximately 2 percentage points, and the 95 percent confidence interval for the difference is 23 ± 2 or 21 to 25 percentage points.

As part of the first High School and Beyond, followup survey transcripts were requested in fall 1982 for an 18,152-member subsample of the sophomore cohort. Of the 15,941 transcripts actually obtained, a total of 1,969 were excluded because the students had dropped out of school before graduation, 799 were excluded because they were incomplete, and 1,057 transcripts were excluded because either the student graduated before 1982 or the transcript indicated neither a dropout status nor graduation. Thus 12,116 transcripts were utilized for the overall curriculum analysis. All courses in each transcript were assigned a 6-digit code based on *A Classification of Secondary School Courses* (CSSC), which was developed by Evaluation Technologies, Inc. under contract to CS. The number of credits earned in each course was expressed in Carnegie units. The Carnegie unit is a standard of measurement that represents one credit for the completion of a 1-year course. To receive

credit for a course, the student must have received a passing grade ("pass" "D" or higher). Students who transferred from public to private schools or from private to public schools between their sophomore and senior years were eliminated from public/private analyses.

The Hispanic analyses presented in this report relied on students' self identification to classify respondents as members of the various Hispanic subgroups. The classifications were based on respondents' answers to the following questions: "What is your origin or descent? (If more than one, please mark below the one you consider the most impor-

tant part of your background) (MARK ONE)." Under the heading Hispanic or Spanish, four possible answers were listed: "(1) Mexican, Mexican-American, Chicano; 2) Cuban, Cubano; 3) Puerto-Rican, Puertorriqueno or Boricua; 4) Other Latin American, Latino, Hispanic, or Spanish descent (WRITE IN)."

Second International Mathematics Study

The "Second International Mathematics Study" was organized under an association of research institutes in about 24 countries known as the International Association for Evaluation of Educational Achievement (IEA). Sample surveys of two population groups were conducted during the 1981-82 school year in 20 countries. Data were collected from school administrators, teachers, and students.

"Population A" included all students in the grade where the majority of students had attained the age of 13.0 to 13.1 years by the middle of the school year. In all countries, school enrollment is nearly universal at that age and represents the final year of elementary school for most countries. For the United States, population A was the eighth grade. For Japan, the seventh grade was chosen for study because the cognitive mathematics tests were more appropriate for that grade level.

"Population B" was defined as all students who were in the terminal grade of secondary education and who were studying mathematics as a substantial part of their academic program. These students were taking at least 5 hours of mathematics classes each week. In the United States, classes of pre-calculus and calculus were chosen. These classes represented about 12 percent of the total age group. In other countries, population B represented between 6 and 50 percent of the age group.

Altogether, about 20 country educational systems participated in the population A survey and 15 systems participated in the population B survey. The 35 samples ranged in size from 1,000 to 8,800 students.

Further information on the sampling methodology and response rates is available from:

Washington, D.C. 20208.

Office of Research

National Assessment of Educational Progress

The National Assessment of Educational Progress (NAEP) is a project funded by the U.S. Department of Education's Office of Educational Research & Improvement (OERI). The overall goal of the project is to determine the Nation's progress in education. To accomplish this goal, a cross-sectional study was designed and initially implemented in 1969. Each year, NAEP has gathered information about selected levels of education achievement across the country. NAEP has surveyed the education attainments of 9-, 13- and 17-year-olds and young adults (ages 25-35) in ten learning areas. Different learning areas have been assessed every year, and all areas have been periodically reassessed in order to measure possible changes in education achievement.

The reading assessment presented in this publication was designed by the Education Commission of the States and conducted by the Educational Testing Service. Multi-stage probability samples were used. The primary sampling units were stratified by region, and within region, by State, size of community, and—for the two smaller sizes of community strata—by socioeconomic level. Assessment exercises were administered either to individuals or small groups of students by specially trained personnel.

Information from NAEP is subject to both nonsampling and sampling error. Two possible sources of nonsampling error are nonparticipation and instrumentation. Nonparticipation is held to a minimum through oversampling, although this does not assess the bias of nonparticipants. Instrumentation nonsampling error concerns whether the NAEP assessment instruments measure what is being taught and in turn what is being learned by the students.

Questions concerning NAEP should be directed to:

National Assessment of Educational Progress
P.O. Box 2923
Princeton, New Jersey 08541.

Office for Civil Rights

Civil Rights Survey of Elementary and Secondary Schools

The fall 1980 "Civil Rights Survey of Elementary and Secondary Schools" was conducted to obtain data on the characteristics

of students enrolled in public schools throughout the Nation. The information is required by the U.S. Department of Education's Office for Civil Rights (OCR) to fulfill its responsibilities under Title VI of the Civil Rights Act of 1964, Title IX of the Education Amendments of 1972, and Section 504 of the Rehabilitation Act of 1973. Some 5,000 school districts and 51,000 individual schools participated. School districts were not randomly selected; rather, districts warranting continued monitoring based on the 1978 survey were chosen along with a random sample of remaining districts serving at least 300 students.

Further information is available from:

Nancy Russell
Surveys Branch
Office for Civil Rights
400 Maryland Avenue, SW.
Washington, D.C. 20202.

Bureau of the Census

Current Population Survey

Current estimates of school enrollment as well as social and economic characteristics of students are based on data collected in the Census Bureau's monthly household survey of about 60,000 households. The monthly Current Population Survey (CPS) sample consists of 614 areas, comprising 1,113 counties, independent cities, and minor civil divisions throughout the 50 States and the District of Columbia. The sample was initially selected from the 1970 census files and is periodically updated to reflect new housing construction when possible.

The monthly CPS deals primarily with labor force data for the civilian noninstitutional population (excluding military personnel and their families living on post and inmates of institutions). In addition, supplemental questions are asked about the education of all eligible members of the household. The October 1982 survey obtained information about highest grade completed, level of current enrollment, attendance status, number and type of courses, degree or certificate objective, and type of organization offering instruction.

The estimation procedure employed for the monthly CPS data involves the inflation of

weighted sample results to independent estimates of characteristics of the civilian noninstitutional population in the United States by age, sex, and race. These independent estimates are based on statistics from decennial censuses; statistics on births, deaths, immigration, and emigration; and statistics on the strength of the Armed Forces. Generalized standard error tables are provided in *Current Population Reports*. The data are subject to both nonsampling and sampling errors.

Washington, D.C. 20208.

Educational Attainment

Data on years of school completed are derived from two questions which are on the CPS instrument. Formal reports documenting educational attainment are produced by the Bureau of the Census using March CPS results.

Nonsampling variability in the educational attainment data are subject to the general constraints and problems listed concerning the CPS. In addition, some data indicate the respondents have a tendency to overestimate the educational level of members of their household. This is probably due to a lack of the respondent's knowledge of the exact educational attainment of each household member or perhaps a hesitancy to acknowledge anything less than a high school education. Another cause of nonsampling variability is the change in the Armed Forces population over years. The CPS excludes members of the Armed Forces who are living outside the United States or who are unmarried and living on post. In 1970, 25 percent of all males 20 and 21 years old were in the Armed Forces. By 1974, this had decreased to less than 10 percent. The exclusion from the CPS of a substantial proportion of the members of the Armed Forces appears to increase the proportion of the CPS population who have some college education and decrease the proportion who finished high school but went no further. This was true in 1970, when data was available for such

comparison. The situation may have changed because of the end of the draft and the initiation of the volunteer Army.

Examples of the sampling variability in the estimates of educational attainment are given in table A3. The figures shown in the table hold for total or white population estimates only. The variability in estimates for subgroups (e.g., region, household relationships) can be estimated using the tables presented in the original source documents.

Questions concerning educational attainment in the United States may be directed to:

Chief, Education and Social Stratification
Branch
Bureau of the Census
Washington, D.C. 20233.

Participation in Adult Education Survey

In May of each of the following years—1969, 1972, 1975, 1978, and 1981—interviewers augmented the Current Population Survey with the "Participation in Adult Education" (PAE) survey. In addition to the CPS questions, interviewers asked if anyone in the household 17 years of age or older had participated in adult education in the 12-month period prior to the survey date. A survey form was either filled out by the interviewer or left with a member of the household when participants were not home at the time of the interview. In 1981, the supplement form was no longer left behind; they were completed by the interviewer.

The PAE response rate in 1981 was 94 percent. Viewed in conjunction with the 96 percent response rate of the CPS, the overall response rate for the PAE survey in 1981 is therefore 90 percent.

Table A3.—Estimated percentages of the CPS educational attainment

Estimate	Base of percentage (thousands)	Standard error	90 percent confidence interval
2 or 98	100	2.0	0 to 5.2*
	100,000	0.06	1.90 to 2.10
10 or 90	100	4.3	3.1 to 16.9
	100,000	0.14	9.78 to 10.22
50	100	7.2	38.5 to 61.5
	100,000	0.2	49.7 to 50.3

*The confidence interval for the larger values can be found by taking the complement of that shown, e.g. for 98 it would be 94.8 to 100.

Table A4.—Estimated number participating (number in thousands) in the CPS "Participation in Adult Education" survey

Estimate	Standard error	90 percent confidence interval
10	4.5	2.8 to 17.2
50	10.2	33.7 to 66.3
500	30	452 to 548
50,000	253	49,595 to 50,405

As previously noted, a second source of variability in estimates obtained from a sample survey lies in the fact that it is a sample. That is, there would be no sampling variability in a complete census. Examples of the sampling variability in the estimates from the PAE survey are given in tables A4 and A5.

The figures shown in the tables hold for total or white population estimates only. The variability in estimates for subgroups (employment status, income, education) can be estimated using the tables presented in the original source documents.

Further information concerning the PAE survey may be obtained from:

Postsecondary Education Statistics Division
Center for Statistics
555 New Jersey Avenue, NW.
Washington, D.C. 20208.

School Enrollment

Each October, the Current Population Survey interview is augmented with additional questions concerning school enrollment. The school enrollment supplement is administered by the CPS interviewer.

The main sources of nonsampling variability in the responses to the supplement are those inherent in the CPS. The question of current enrollment is not as sensitive as the question concerning educational attainment

— for example, acknowledging the lack of a high school diploma. The determination of current grades may be in error because the respondent may not actually know the information for every student in the household. This problem is especially prevalent for households with members in college and households with children in nursery school. In the case of household members in college, confusion over the exact number of credits or hours taken by students may make it difficult to determine the year in which the student is enrolled. With young children, a problem could occur with the definition nursery school. A nursery school is defined as a group or class that is organized to provide educational experiences for children. Educational experiences could be interpreted differently by different respondents.

Examples of the sampling variability in the estimates of school enrollment are given in Table A6. The figures shown in the table hold for total or white population estimates only. The variability in estimates for subgroups (e.g., region, race, etc.) can be estimated using the tables presented in the original source document.

Questions concerning the CPS School Enrollment survey may be directed to:

Chief, Education and Social Stratification
Branch
Bureau of the Census
Washington, D.C. 20233.

Table A5.—Estimated participation rate of the "CPS Participation in Adult Education" survey

Estimate	Base of percentage rate (thousands)	Standard error	90 percent confidence interval
1 or 99*	50	2.4	0 to 4.8
	5,000	0.2	0.68 to 1.3
10 or 90	50	7.1	0 to 21.4
	5,000	0.7	8.9 to 11.1
50	50	11.8	31.1 to 68.9
	5,000	1.2	48.1 to 51.9

*The confidence interval for the larger values can be found by taking the complement of that shown, e.g., for 99 it would be 95.2 to 100.

Table A6.—Estimated number of persons of the CPS School Enrollment

Estimated number of persons	Total persons in age-sex group	Standard error	90 percent confidence level
100	100	4.3	4.1 to 16.9
	1,000	4.5	2.8 to 17.2
	100,000	4.5	2.8 to 17.2
1,000	1,000	13.6	78.2 to 121.8
	10,000	14.3	77.1 to 122.9
	100,000	14.4	77.0 to 123.0
10,000	25,000	111.3	9,822 to 10,178
	100,000	136.3	9,782 to 10,218

Part 2.—Other Organizations

Market Data Retrieval

Market Data Retrieval is a market research company that compiles mailing lists of schools and school districts. They also conduct special analyses of school characteristics. In the last few years they conducted surveys of computer use in public and private schools.

During its annual summer survey of public school districts, Market Data Retrieval included questions about computer use in public schools. All school districts were asked how many of their schools were using computers. In the fall, an additional mail survey was conducted to gather more information on the number and type of computers being used. Data on computer utilization were reported for 86 percent of public schools. These data were used to generate State by State estimates which were aggregated to construct a national total.

Private school data were compiled through mail and telephone surveys during the middle of the 1982-83 and 1983-84 school years. The 1983-84 response rate for the Catholic schools was 96 percent and the rate for the other private schools was 89 percent.

Further information on these surveys may be obtained from:

Ginny Cardozo
Market Data Retrieval
Ketchum Place
Westport, Connecticut 06880.

National Education Association

Estimates of School Statistics

The National Education Association (NEA) reports revenues and expenditure data in its annual publication, *Estimates of School Statistics*. Each year, NEA prepares regression-based estimates of financial and other education statistics that are submitted to the States for verification. Generally, about 30 States adjust these estimates based on their own data. These preliminary data are published by NEA along with revised data from previous years. States are asked to revise previously submitted data as final figures become available. The most recent publica-

tion contains all changes reported to the NEA.

Some tables use revised estimates of financial data prepared by NEA because it was the most current source. Expenditure data reported to CS must be certified for use in Department of Education formula grant programs, such as Chapter 1 of the Education Consolidation and Improvement Act. As a result, CS data are not available as soon as NEA estimates.

Questions concerning the NEA estimates may be directed to:

National Education Association—Research
1201 16th Street, NW.
Washington, D.C. 20036.

Status of the American Public School Teacher

"Status of the American Public School Teacher" is a survey conducted every 5 years by the National Education Association. The survey was designed by the NEA Research Division and initially administered in 1956. The intent of the survey is to solicit information covering various aspects of public school teachers' professional, family, and civic lives.

Selection of participants for the survey is accomplished using a two-stage sample design, with the first stage stratum being determined by the number of students enrolled in the districts. Selection probabilities are determined so that the resulting sample is self-weighting. In 1980-81, a sample of 1,768 was selected from the approximately 2,185,000 public school teachers and 1,326 usable replies were obtained. This yielded a response rate of 75 percent.

Possible sources of nonsampling errors are nonresponses, misinterpretation—and when comparing data over years—changes in the sampling method and instrument. Misinterpretation of the source items should be minimal, as the sample responding is not from the general population but one knowledgeable about the area of concern. With the sampling procedure changed after 1956, and some wording of items changed over the different administrations, care is taken to present only comparable data.

Since sampling is used, sampling variability is inherent in the data. An approximation to the maximum standard error for estimat-

ing the population percentages is 1.4 percent. To estimate the population percentage with 90 percent confidence, the maximum standard error of 1.4 percent is multiplied by 1.65 ($0.014 \times 1.65 = 0.023$) to produce the largest error associated with any single sample proportion (2.3 percent). For example, if a sample percentage is 60 percent, there is a 90 percent chance that the population percentage lies between 57.7 percent and 62.3 percent (60 percent $\pm$ 2.3 percent). If comparisons of two percentages are

to be made, table A6 gives maximum differences for significance at the 90 percent confidence level.

Questions concerning the "Status of the American Public School Teacher" survey may be directed to:
